Lab Prerequisites

You must have a Power Apps license and an environment with CDS database.

You must have a valid SharePoint Online license and permission to create lists.

You must have a public SharePoint site where you can store the data for the app.

Download the assets from [Crisis Communication assets](#)

Crisis Communication App

The Crisis Communication app provides a user-friendly experience to connect users with information about a crisis. Quickly get updates on internal company news, get answers to frequently asked questions, and get access to important information like links and emergency contacts. This app requires a small amount of setup to make it your own.

In this walkthrough, you'll learn how to:

- Create a location for your data.
- Import both the Crisis Communication app and its admin app.
- Create content for the app.
- Import flows to send notifications to users.
- Create a centrally managed Teams team to aggregate data and to effectively respond to issues.

Estimated time to complete these steps: **45–60 minutes**.

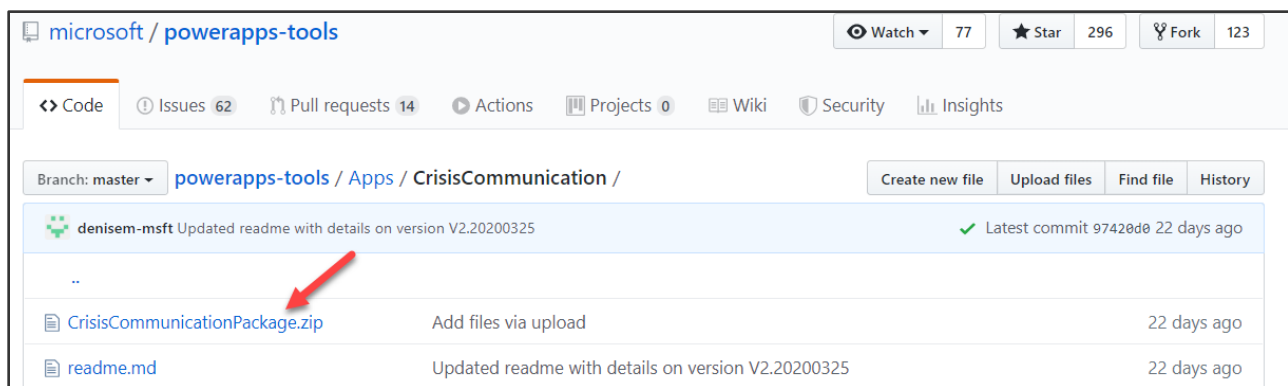

Exercise 1: Download and Configure

In this exercise, you will download the crisis communication assets, create a SharePoint public team site, Import Flow that will auto generate SharePoint lists, edit Flow, and run the Flow to generate SharePoint lists.

Task 1: Download the assets

In this task, you will download the crisis communication assets.

1. Navigate to [Crisis Communication assets](#) GitHub repository and click CrisisCommunications.zip.

2. Click **Download** and save it on your machine.

3. Locate the zip file you downloaded, right click on the file again and select **Extract all**.
4. Click **Extract**.
5. Double click to open the extracted folder.
6. Examine the folder content. Remember where this folder is located because you will come back to it in future steps.

Task 2: Create SharePoint site

In this task, you will create a public SharePoint team site.

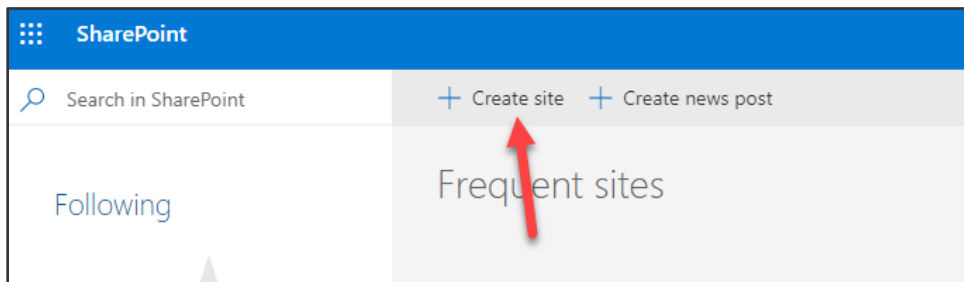

1. Navigate to [Office 365](#) and click **Sign in**.

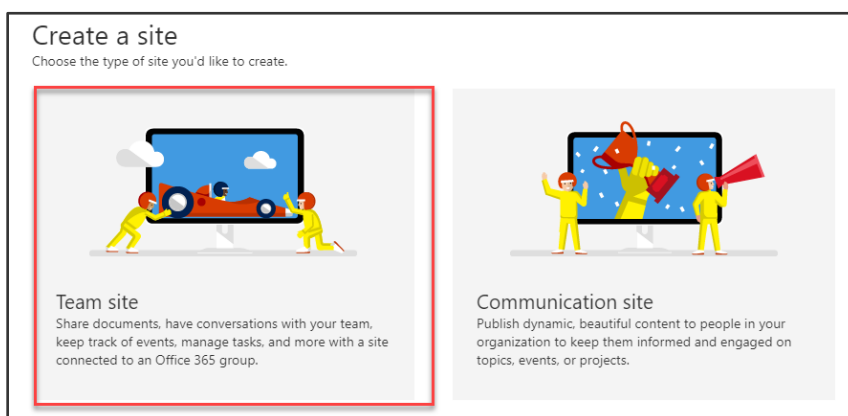

2. Provide your admin credentials and sign in.
3. Select **SharePoint**.

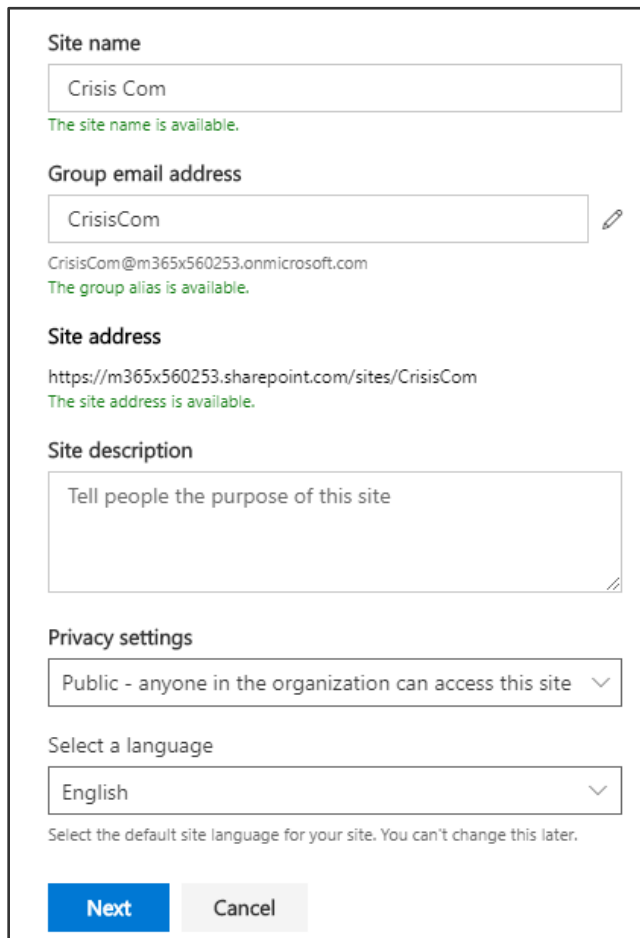

4. Click + **Create site**.

5. Select **Team site**.

6. Provide a name for the site, select **Public** for **Privacy**, select your language, and then click **Next**.

Site name
Crisis Com
The site name is available.

Group email address
CrisisCom 
CrisisCom@m365x560253.onmicrosoft.com
The group alias is available.

Site address
https://m365x560253.sharepoint.com/sites/CrisisCom
The site address is available.

You can also add more people later

Add additional owners
Enter a name or email address

Add members
Enter a name or email address

Finish

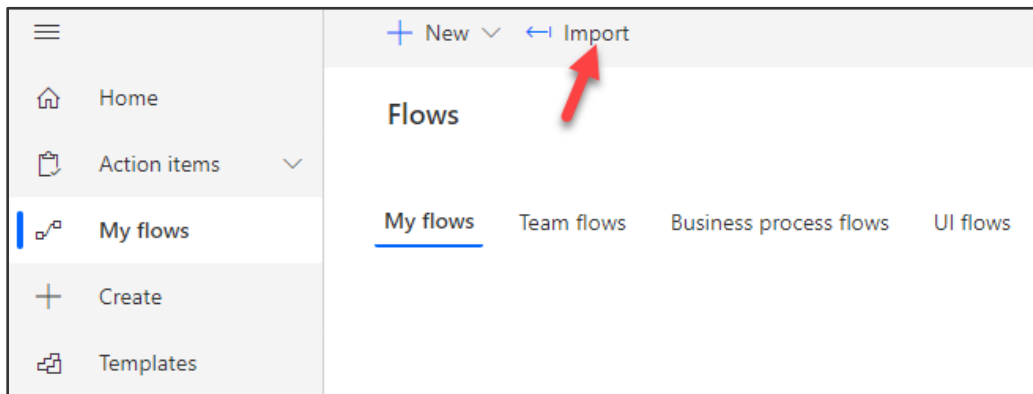

- Copy the SharePoint site URL and keep it in a notepad.

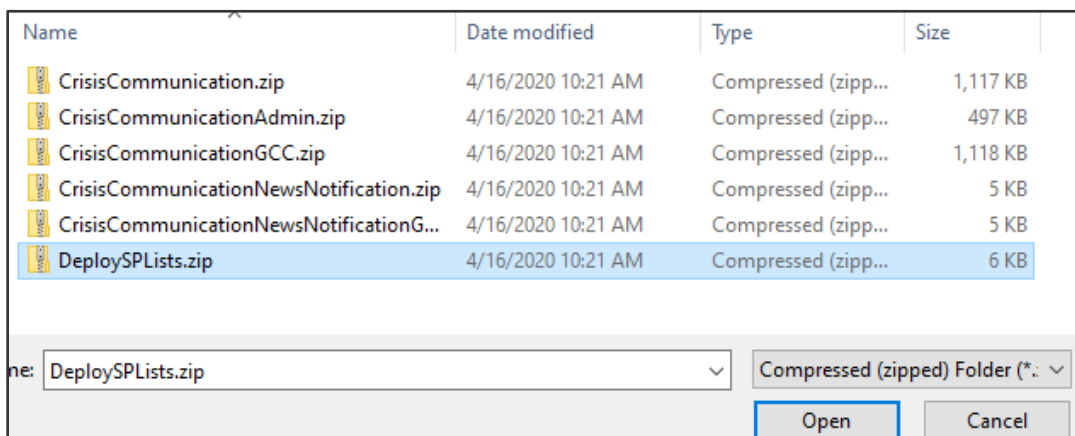

Task 3: Import and configure Flow

In this task, you will import and configure a Flow that will create the SharePoint lists.

- Navigate to [Power Automate](#) and **Sign in**.
- Make sure you are in the correct environment.
- Select **My flows** and click **Import**.

- Click **Upload**.
- Browse to the Crisis Communication Package folder you extracted, select **DeploySPLists.zip**, and click **Open**.

- 6. Wait for the file to be uploaded.
- 7. Go to the SharePoint connection and click **Select during import**.

Display Title	Purpose	Description
CI_LogosAssets	To hold the logo and/or other images to be referenced from the app. The logo will be referenced in Power Apps by a direct link or via the ID number of the logo you want to use.	The library for related logos and other image assets for the <i>[App Name]</i> app.
CI_configAdminSetup	Used for feature configuration by the admin of the app. Note: This list should be read-only for all members who aren't admins.	Admin configuration list for the <i>[App Name]</i> app.
CI_Contacts	Using the default Contacts Content type to capture information about contacts. (No people picker is included, so this list might need to be manually maintained to ensure its data is up to date.) Note: This depends on the global contact list type's being a default content type in the list.	The contacts list for the <i>[App Name]</i> app.
CI_CompanyNews	Collection of Company News items.	A list for managing the news items that appear in the <i>[App Name]</i> app. You can use the Deprecated column to remove news items from the app views, while retaining them as a record.
CI_FAQ	Frequently asked questions.	The list of frequently asked questions for the <i>[App Name]</i> app. You can use the Deprecated column to remove FAQ items from the app views, while retaining them as a record.
CI_UsefulLinks	Useful hyperlinks list.	The list of useful hyperlinks for the <i>[App Name]</i> app. You can use the Deprecated column to remove hyperlink items from the app views, while retaining them as a record.
CI_Employee	Tracking current employee presence status. Examples: working from home , out sick , on personal leave , and out on vacation . Note: The status coming to work is assumed and not included in the list options.	The list of messages that indicate the status of an employee's presence for the <i>[App Name]</i> app. You can use the Deprecated column to remove status messages from the app views, while retaining them as a record.
CI_HelpfulTips	Helpful tips that users have contributed for their peers.	List for the management of shared tips for the <i>[App Name]</i> App. You can use the Deprecated column to remove tips from the app views, while retaining them as a record.

Exercise 2: Import and Configure Apps

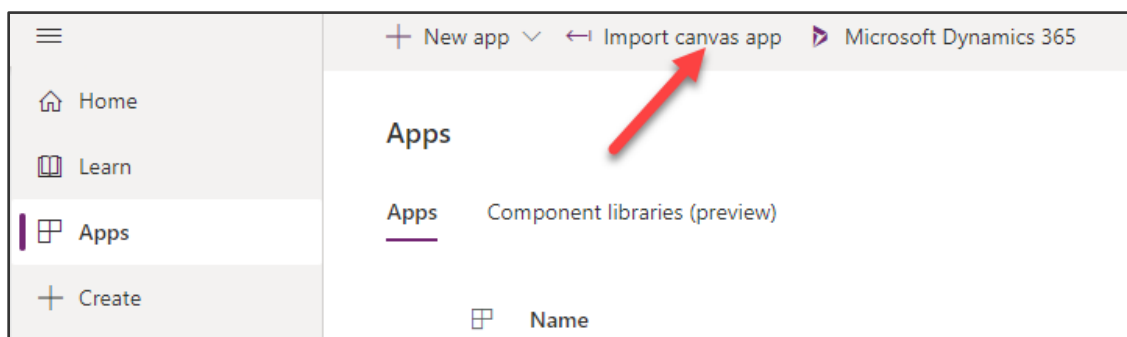

In this exercise, you will import the crisis communication app and crisis communication admin app.

You must have Microsoft Teams and Microsoft Outlook licenses to complete this exercise.

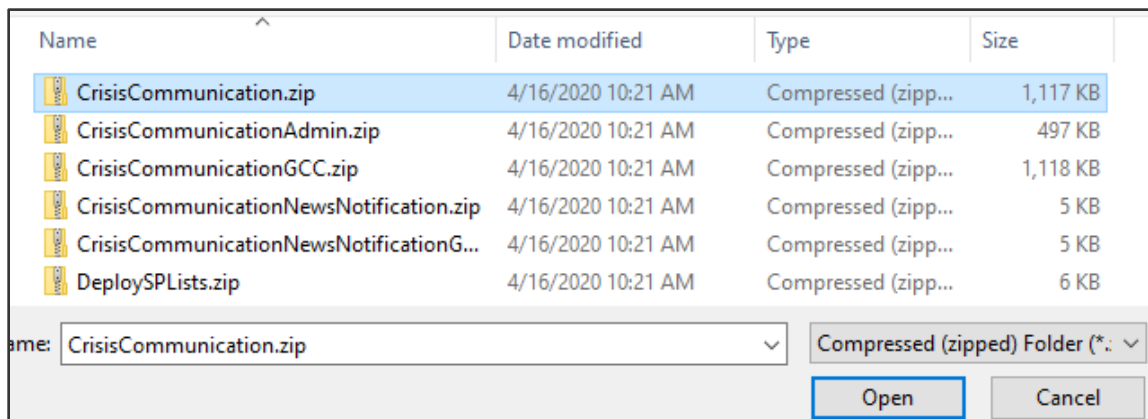

Task 1: Import crisis communication app

In this task, you will import the crisis communication app into your environment and update the SharePoint connections.

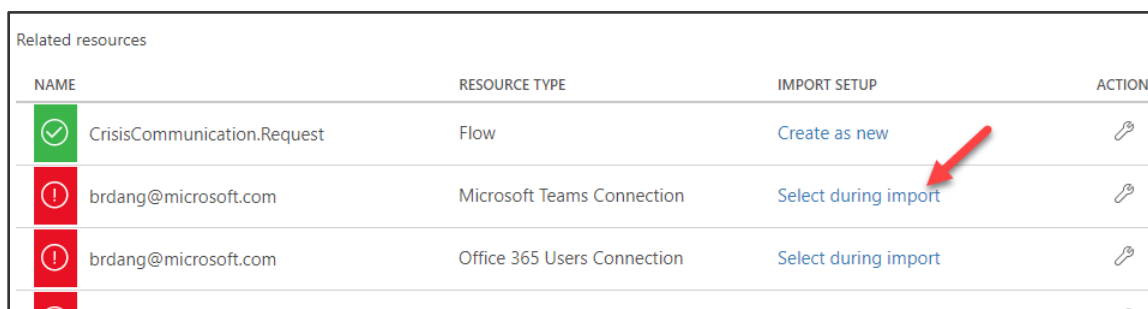

1. Navigate to [Make Power Apps](#) and make sure you are in the correct environment.
2. Select **Apps** and click **Import canvas app**.

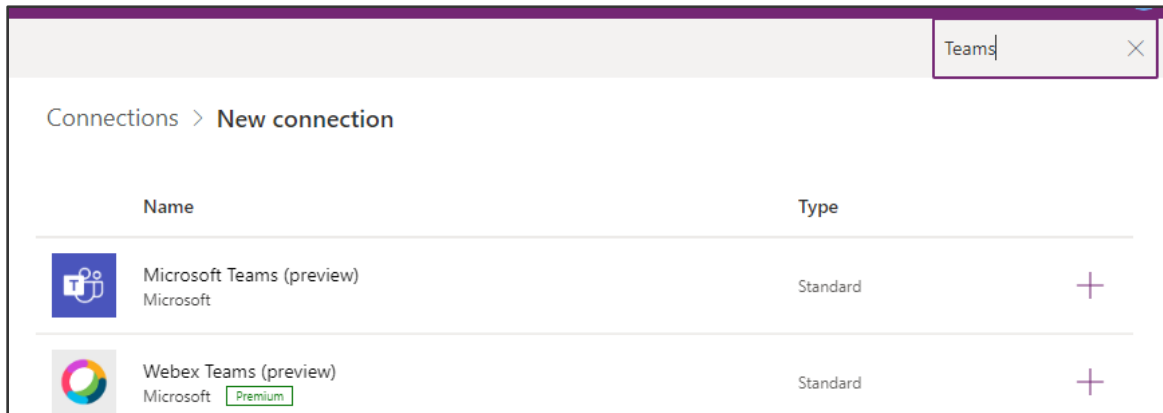

3. Click **Upload**.
4. Browse to the crisis communication package you extracted, Select **CrisisCommunication.zip** and click **Open**.

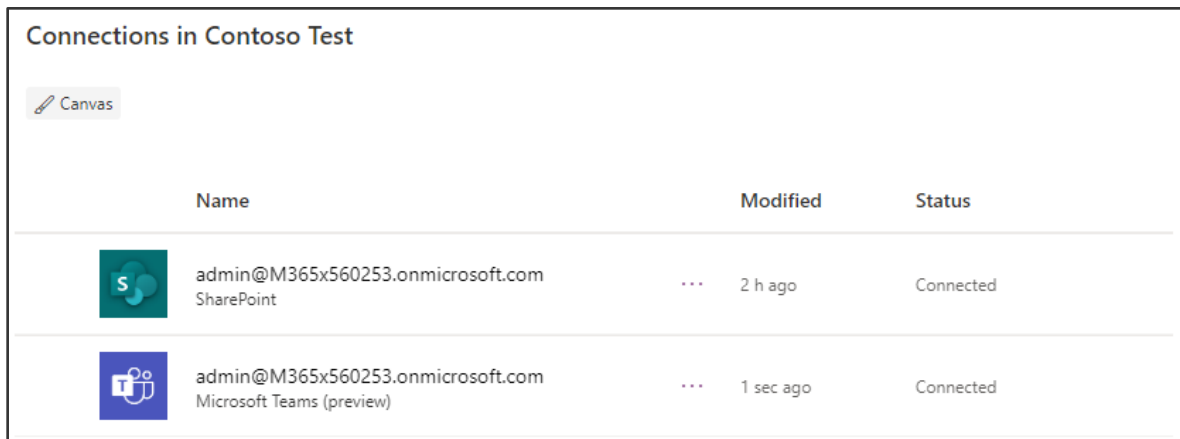

5. Click **Select during import** for **Microsoft Teams Connection**.

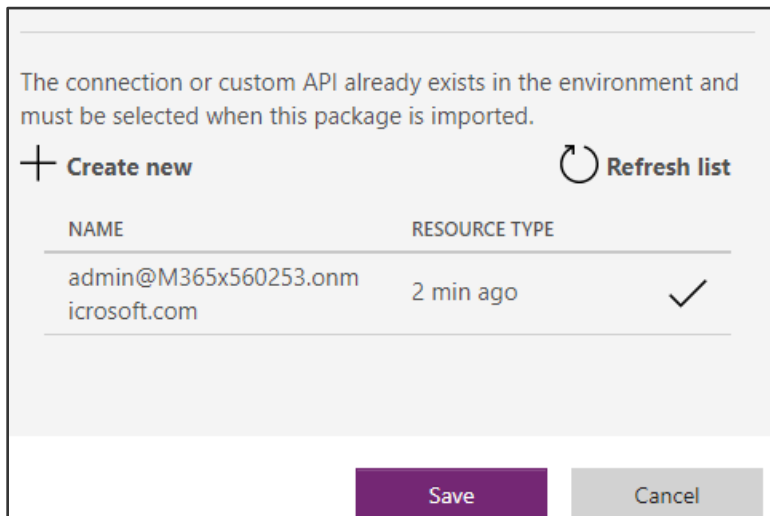

6. Click **+ Create new**.
7. Click **+ New connection**.
8. Search for **Teams** and select **Microsoft Teams**.

9. Click **Create**.
10. Provide your admin credentials.
11. You should now Teams connection connected.
12. Close the connections browser tab or window.

13. Click **Refresh List**, select the connection you created, and click **Save**.

14. Click select during import for **Office 365 Users**.

Open **Cancel**

5. Click **Import** and wait for the application import to complete.

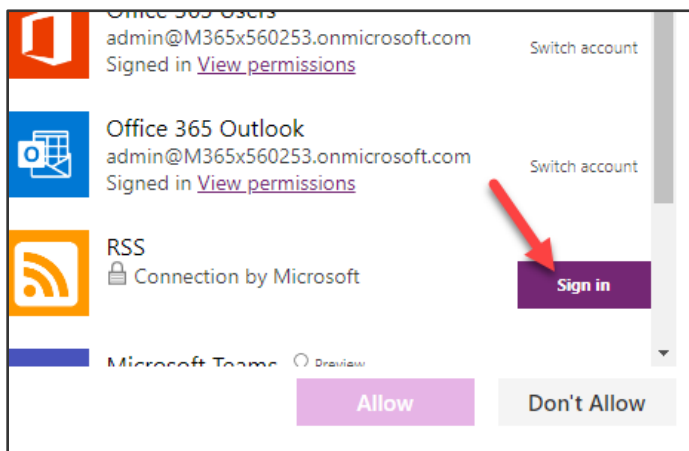

Task 3: Update app data sources

In this task, you will update the data sources for your applications.

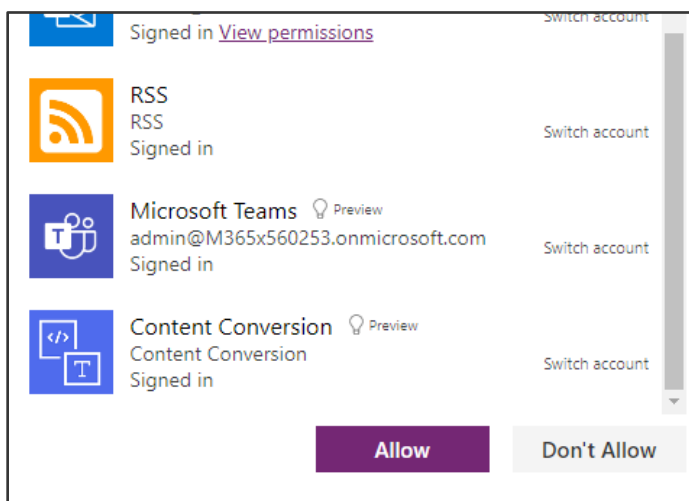

1. Navigate to [Make Power Apps](#) and make sure you are in the correct environment.
2. Select **Apps**, select the **Crisis Communication**, and click Edit.

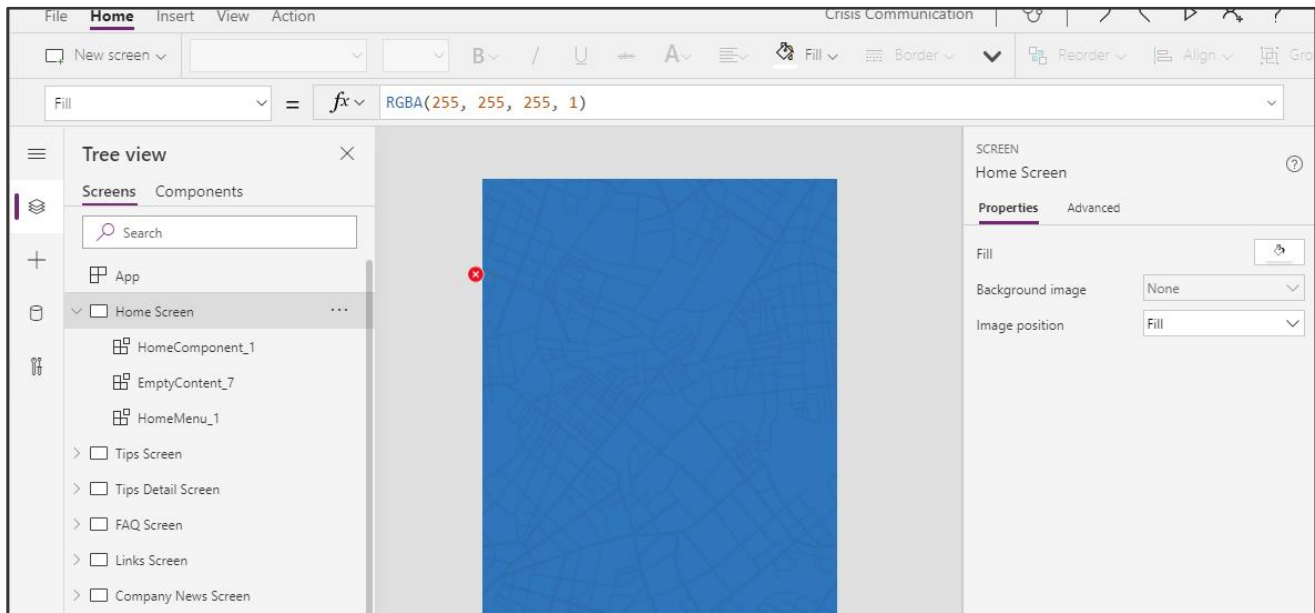

3. Click Sign in for the RSS connection, if prompted.

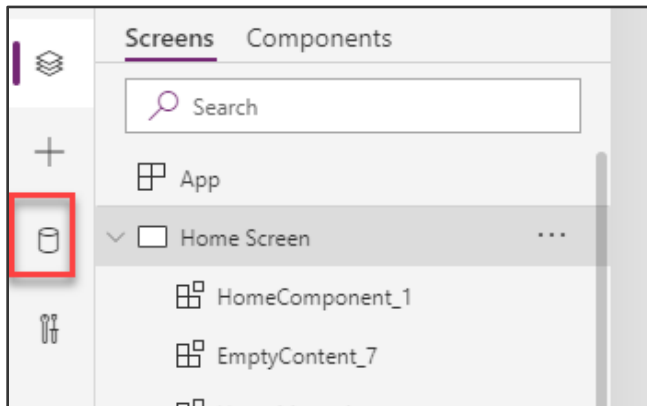

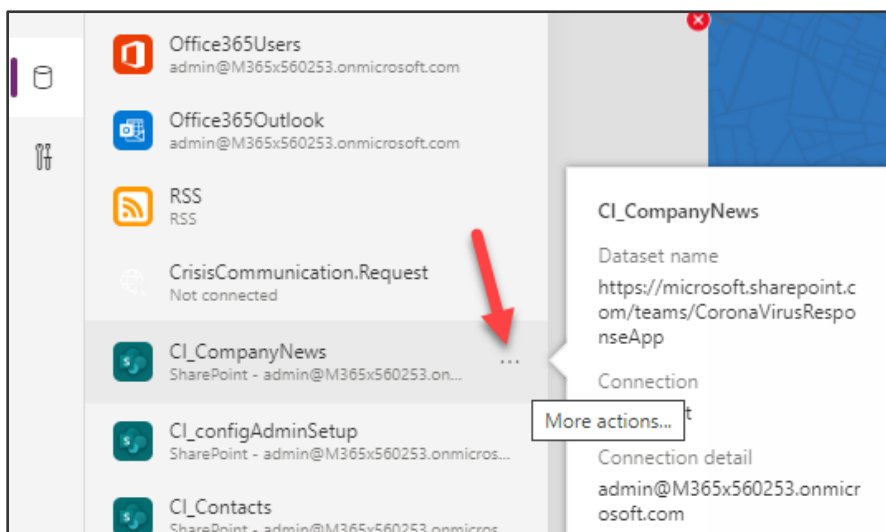

4. Click **Allow**.

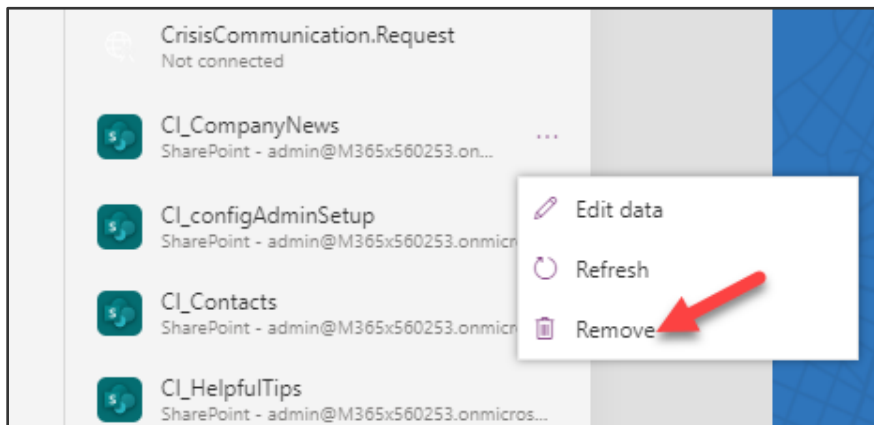

5. The App should open in the Power App Studio.

6. Select Data Sources.

7. Locate **CI_CompanyNews** and click on the ... **More actions** button.

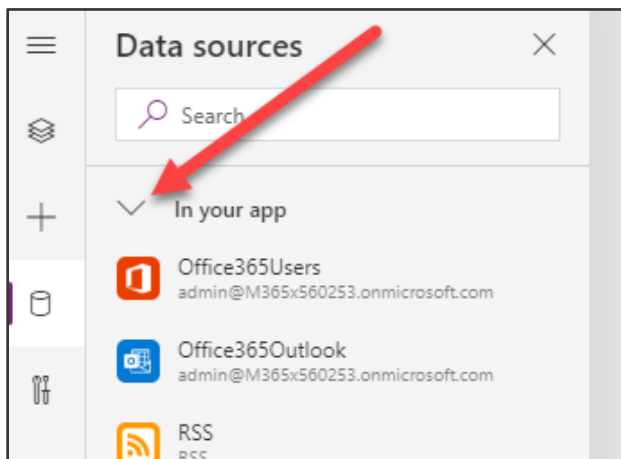

8. Select **Remove**.

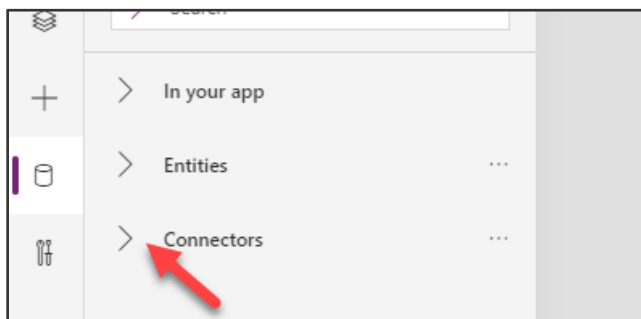

9. Repeat the prior two steps and remove the following apps:

- CI_ConfigAdminSetup
- CI_Contacts
- CI_HelpfulTips
- CI_FAQ
- CI_Employee Status
- CI_Usefulinks

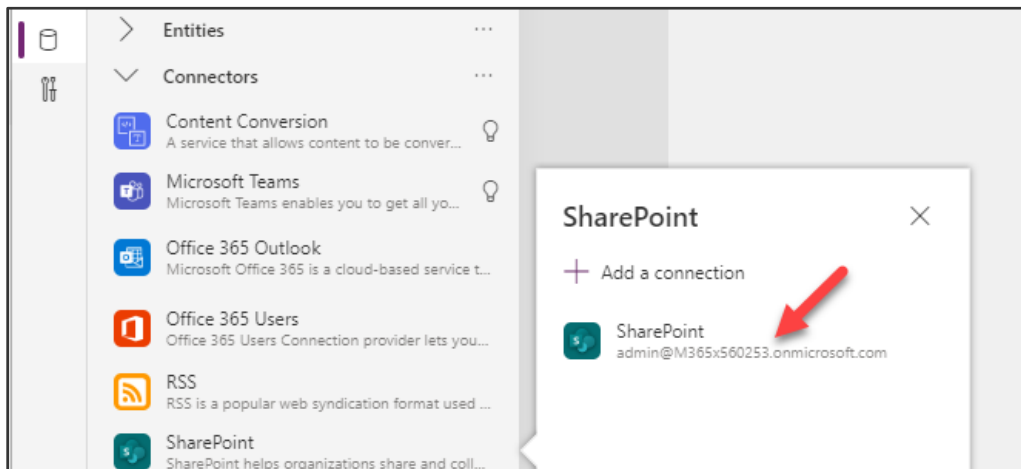

10. Collapse the **in your app** section.

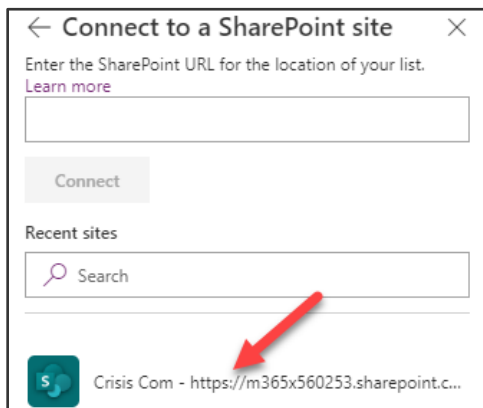

11. Expand the **Connectors** section.

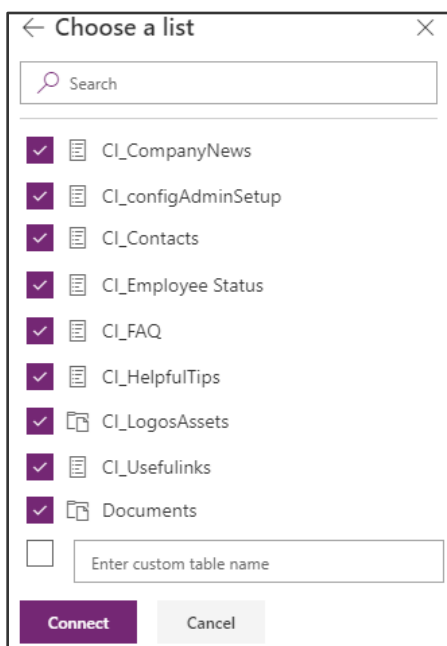

12. Click **SharePoint** and select it.

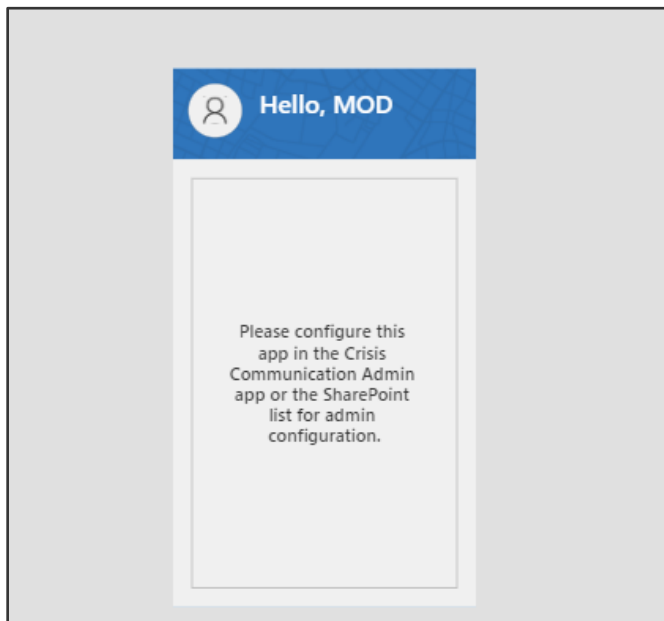

13. Select the SharePoint site you created. If it does not show, paste the URL of the site into “Enter the SharePoint URL” and click Connect.

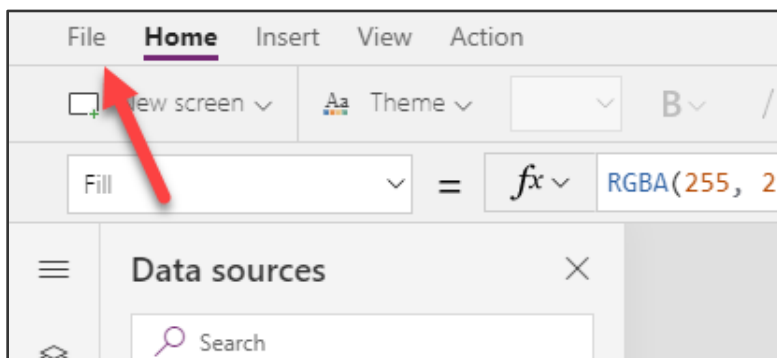

14. Select all the lists and click **Connect**.

15. The app should now load in the designer without errors.

16. Click **File**.

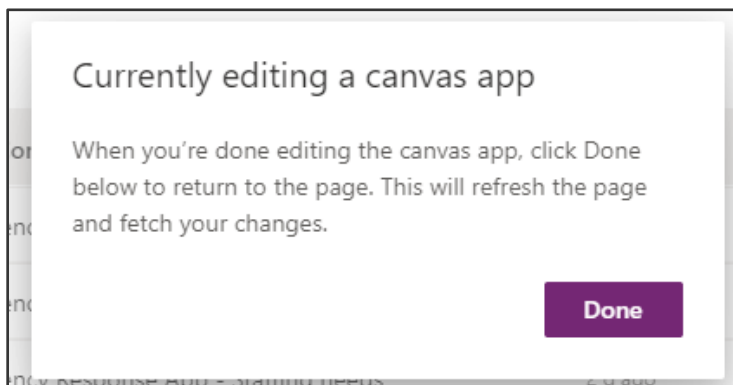

17. Select **Save**.

18. Click **Publish**.

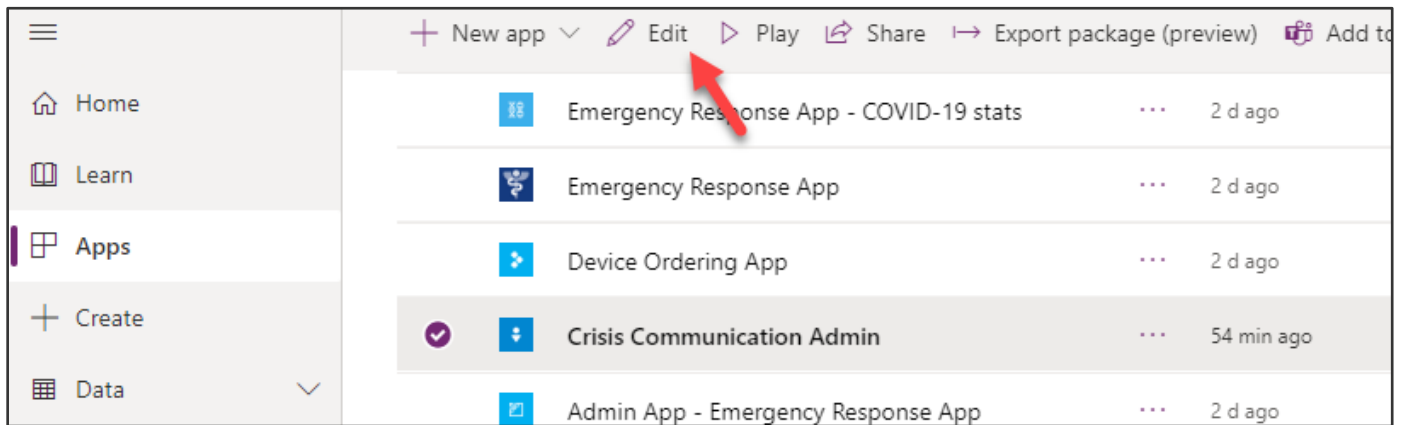

19. Select **Publish** this Version.

20. Close the Power Apps Studio browser tab or window.

21. Click **Done**.

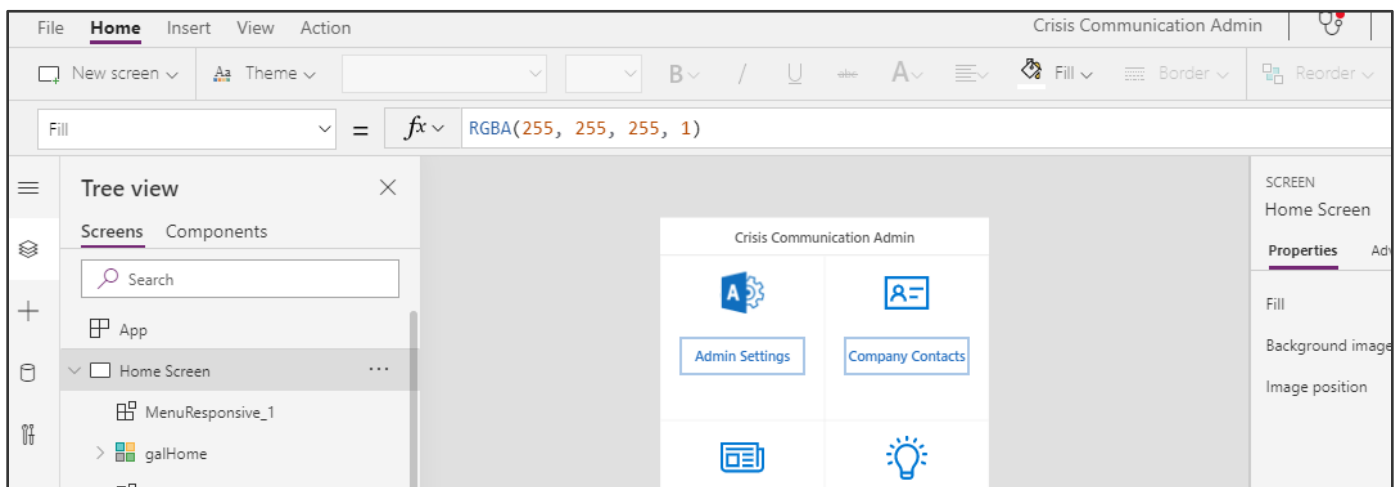

22. Make sure you still have Apps selected. Select the **Crisis Communication Admin** app and click **Edit**.

23. Click **Allow**.

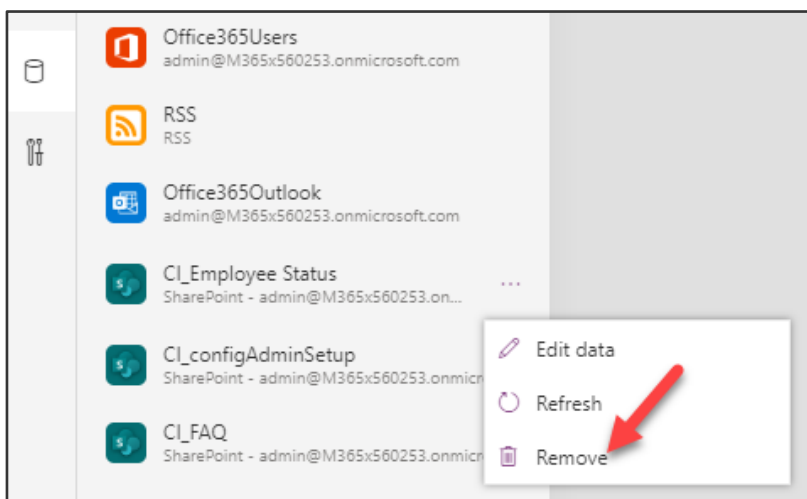

24. The admin app should load inside Power App Studio.

25. Select **Data sources**.

26. Locate **CI_Employee Status** and click on the ... **More actions** button.

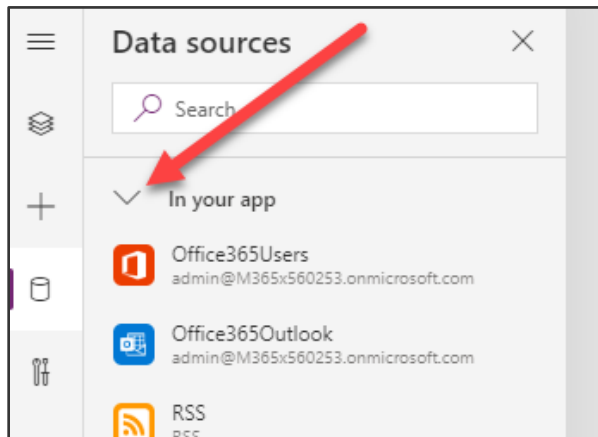

27. Select **Remove**.

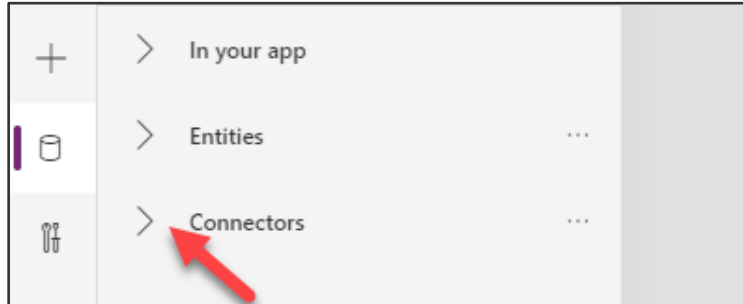

28. Repeat the prior two steps and remove the following:

- CI_configAdminSetup
- CI_Contacts
- CI_HelpfulTips
- CI_FAQ
- CI_CompanyNews
- CI_Usefullinks.

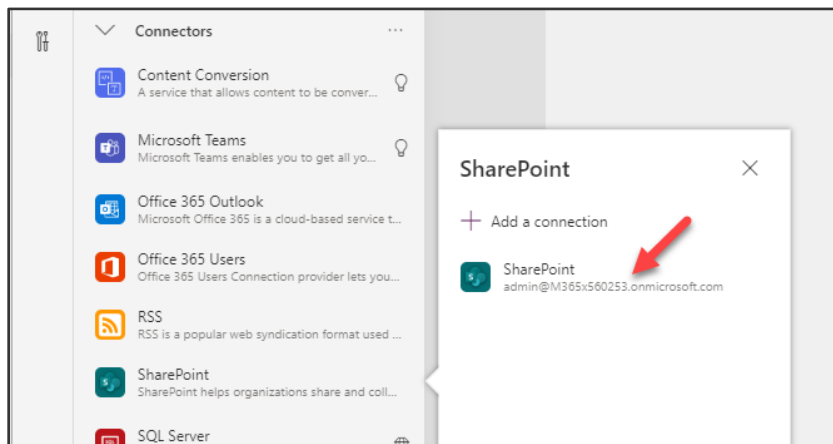

29. Collapse the **in your app** section.

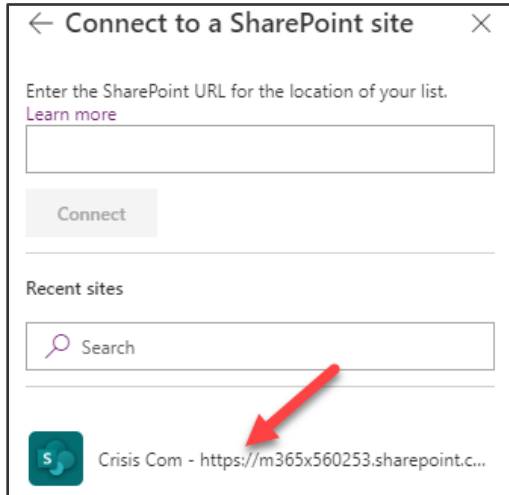

30. Expand the **Connectors** section.

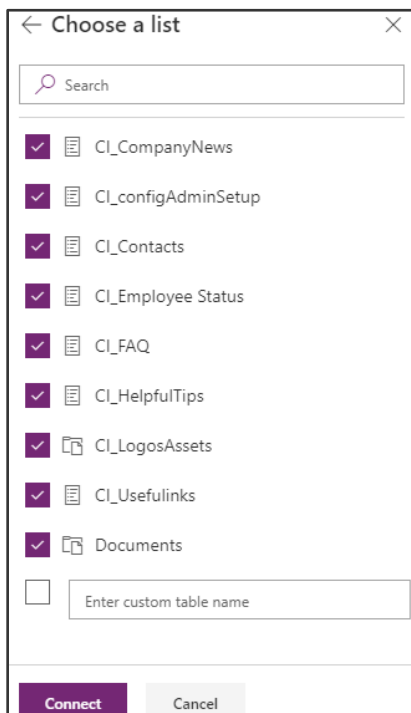

31. Click **SharePoint** and select it.

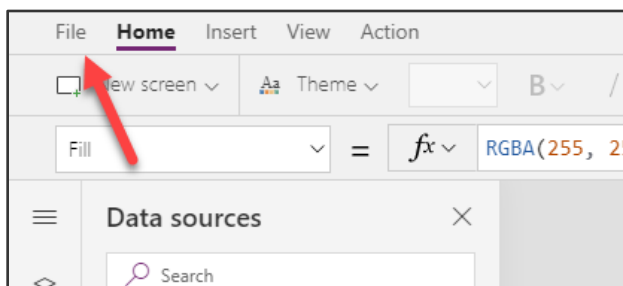

32. Select the SharePoint site you created. If it does not show, paste the URL of the site into “Enter the SharePoint URL” and click Connect.

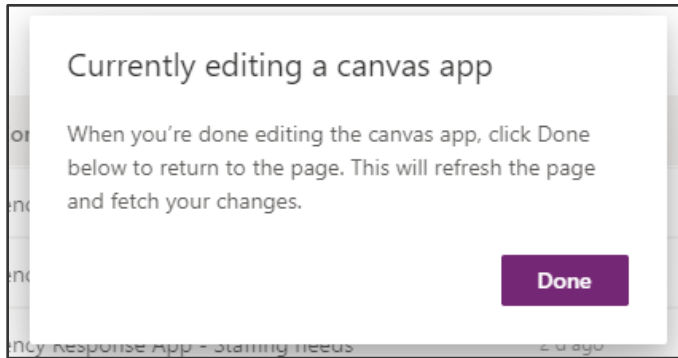

33. Select all the lists and click **Connect**.

34. Click **File**.

35. Select **Save**.
36. Click **Publish**.
37. Select **Publish** this Version.
38. Close the Power Apps Studio browser tab or window.
39. Click **Done**.

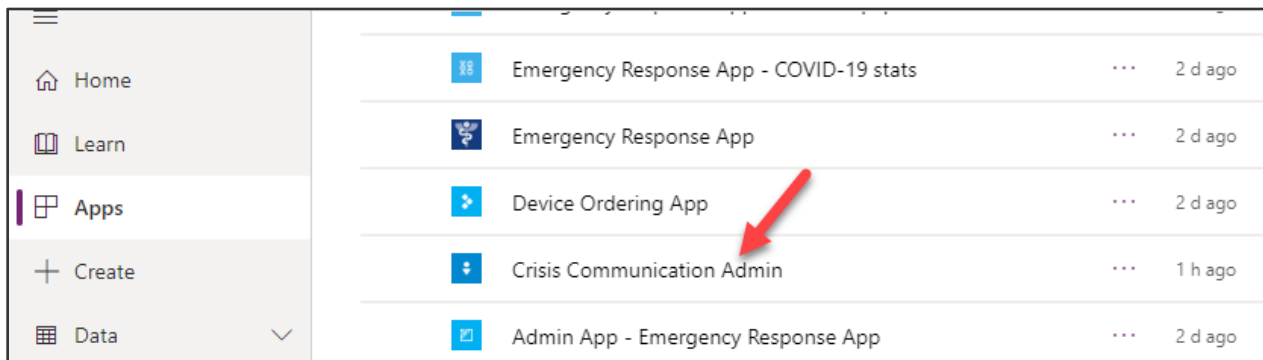

Exercise 3: Setup and test apps

In this exercise, you will setup the admin app and test the client app.

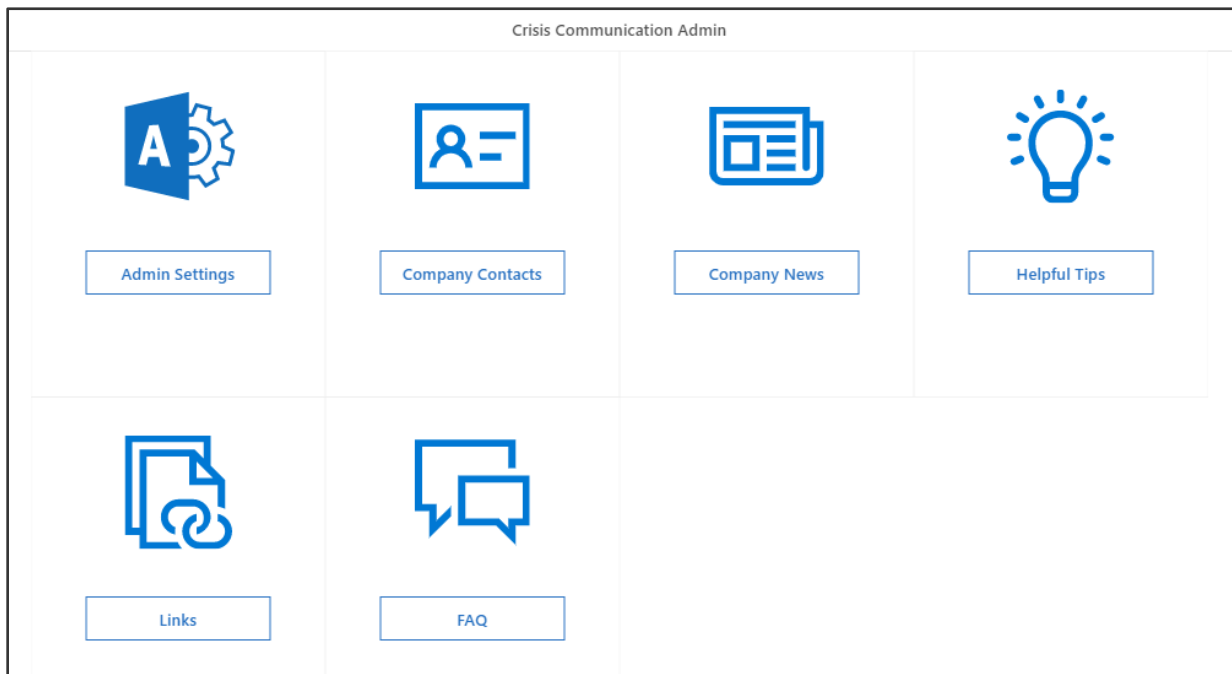

Task 1: Setup admin app

In this task, you will setup the admin app.

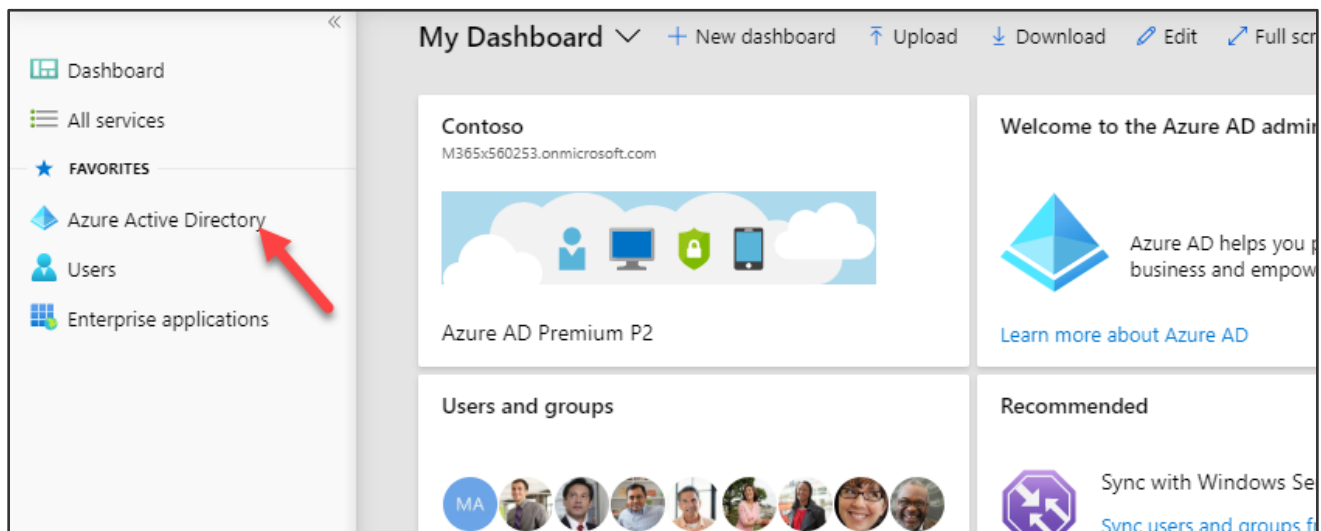

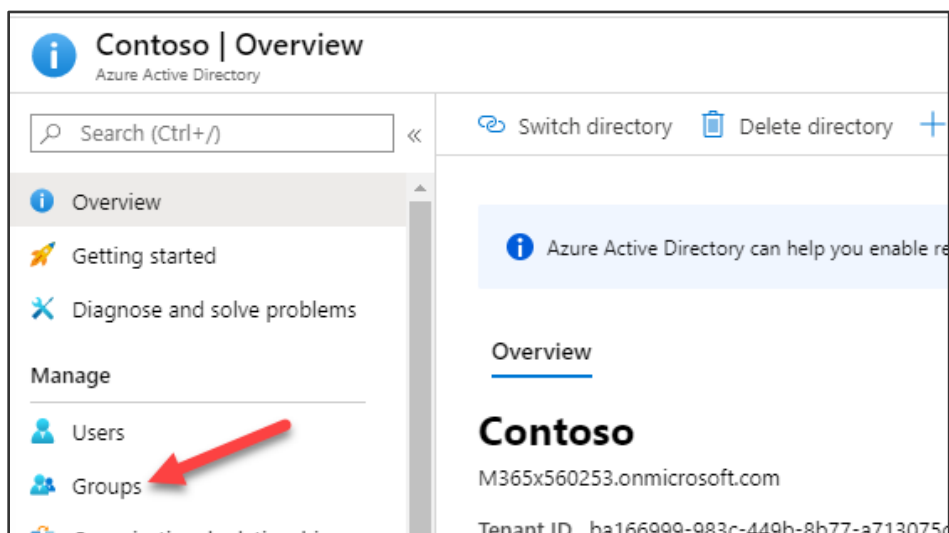

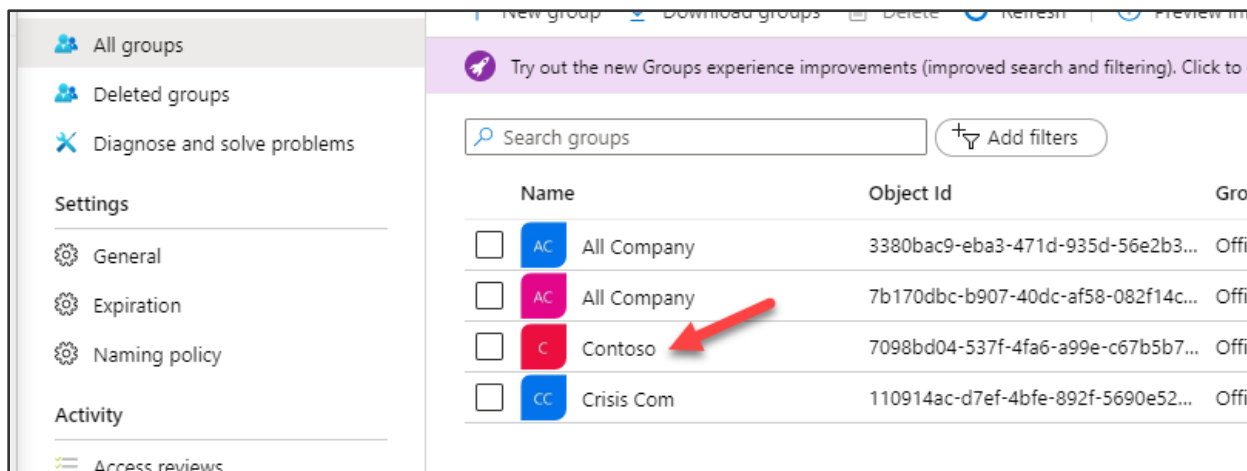

1. Navigate to [Make Power Apps](#) and make sure you are in the correct environment.
2. Select **Apps**, locate and click to open the **Crisis Communication Admin** application.

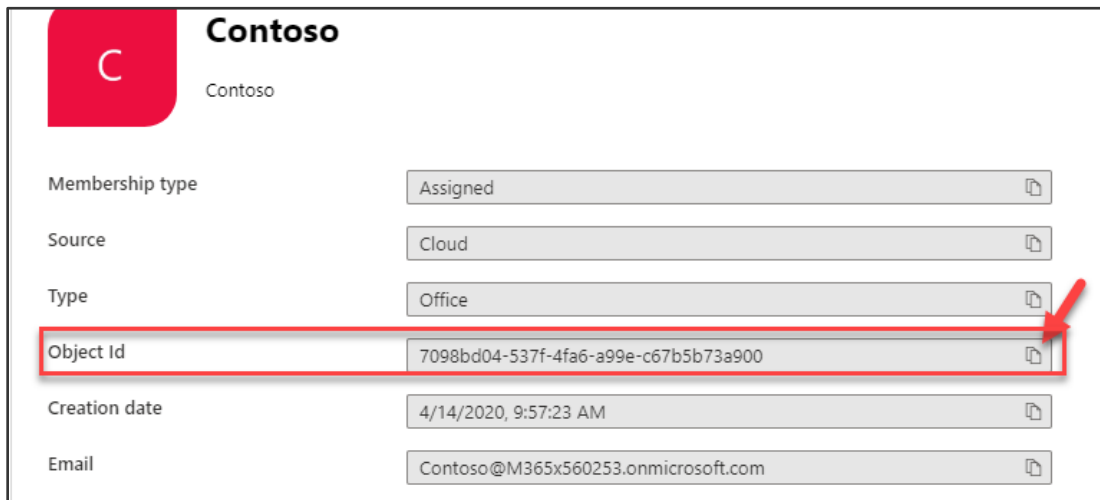

3. The application should load.

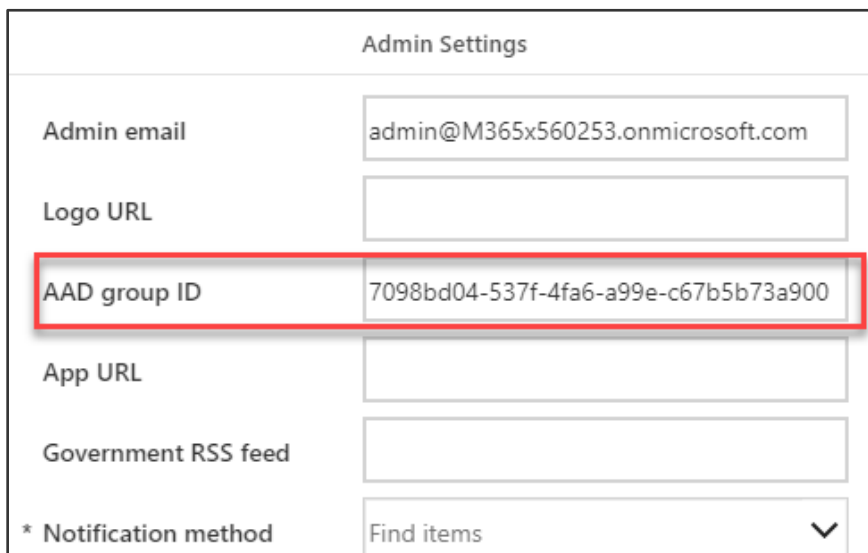

4. Click **Admin Settings**.
5. Provide your admin email address as **Admin email**.
6. Start a new browser window and navigate [Azure Active Directory](#) and sign in with your admin user, if prompted.

7. Select **Azure Active Directory**.8. Select **Groups**.9. You will send notifications to everyone in the company. Select **Contoso** or your company name if it is different.

10. Copy the **Object Id**.

19. Click **Company News**.

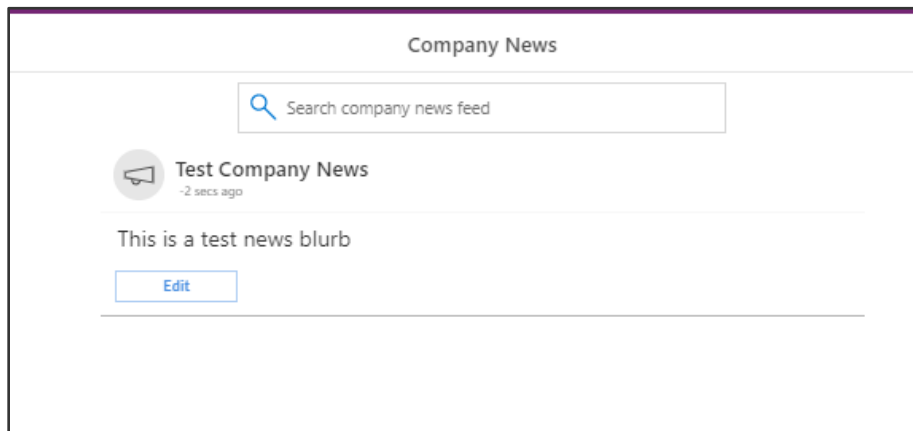

20. Click **Create new post**.

21. Provide some information and click **Save**.

A screenshot of the 'Edit Update' form. It has a title field with the text 'Test Company News'. Below that is a 'Details' section with a rich text editor containing the text 'This is a test company news'. Underneath the editor is a 'Blurb' field with the text 'This is a test news blurb'. At the bottom, there is a 'Deprecated' toggle switch set to 'No'. A large blue 'Save' button is at the very bottom.

22. You should now have at least one company news.

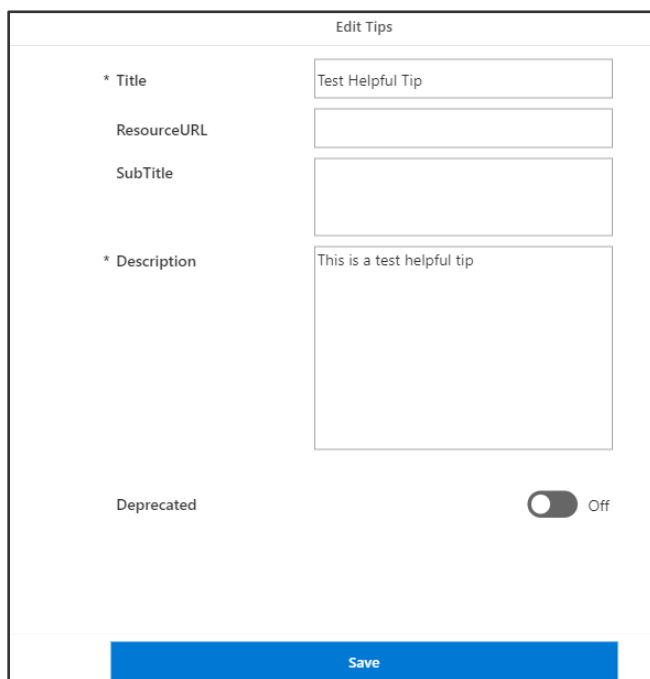

23. Click on the <- **Back** button.

24. Select **Helpful Tips**.

25. Click **New tip**.

26. Provide some test data and click **Save**

27. Click on the <- **Back** button.

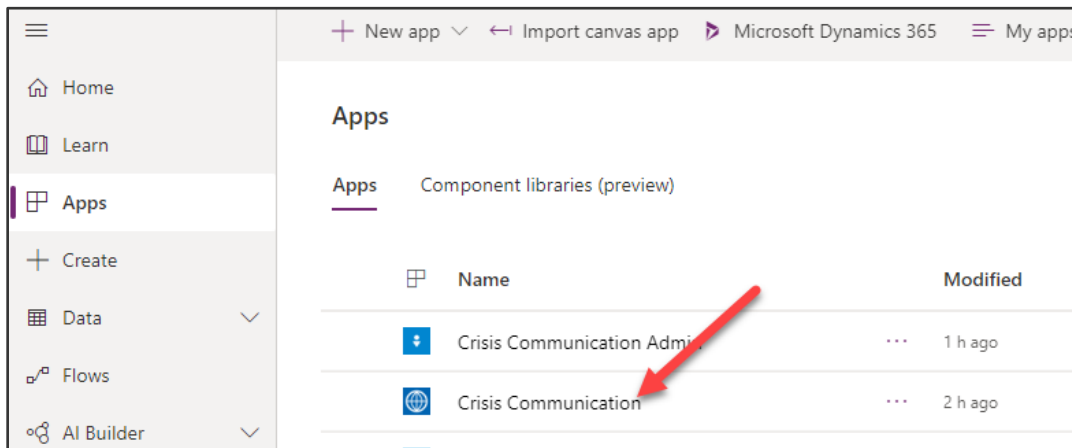

28. Close the Crisis Communication Admin application.

Task 2: Test the client app

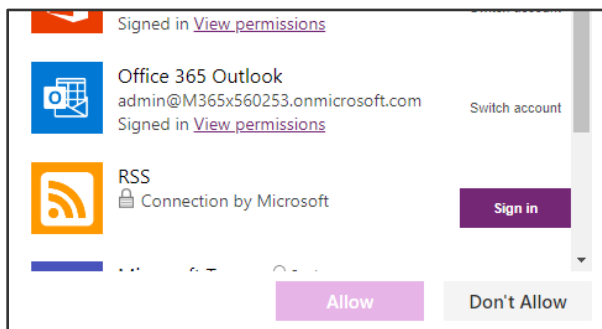

In this task, you will test the crisis communication client application.

1. Navigate to [Make Power Apps](#) and make sure you are in the correct environment.

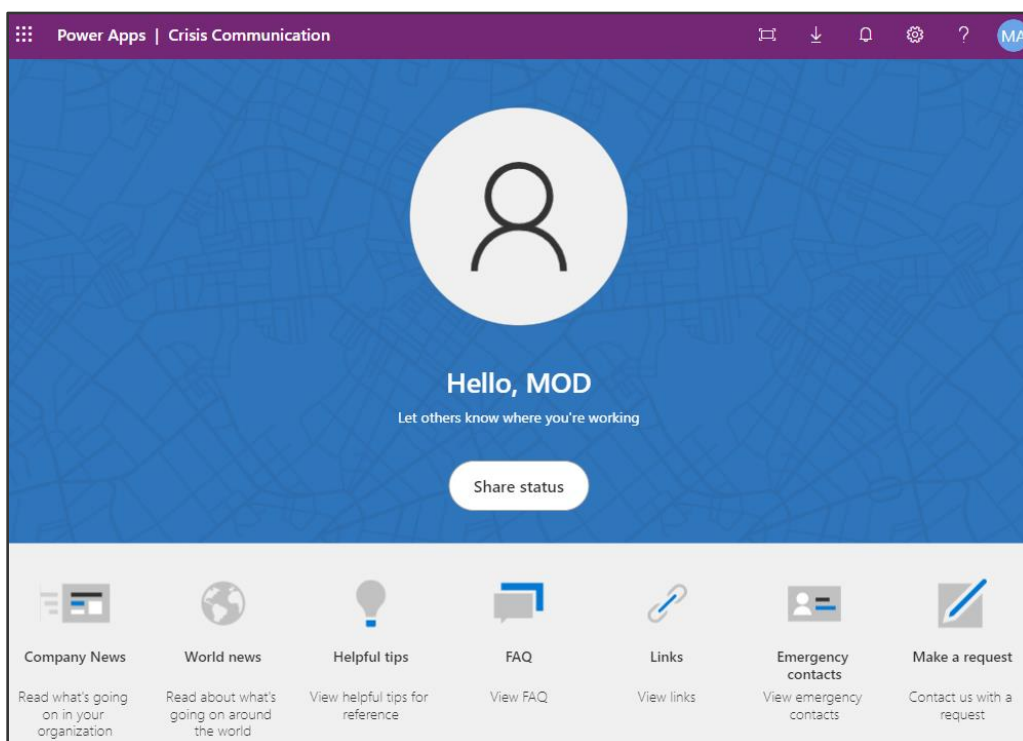

2. Select Apps, locate and click to open the **Crisis Communication** application.

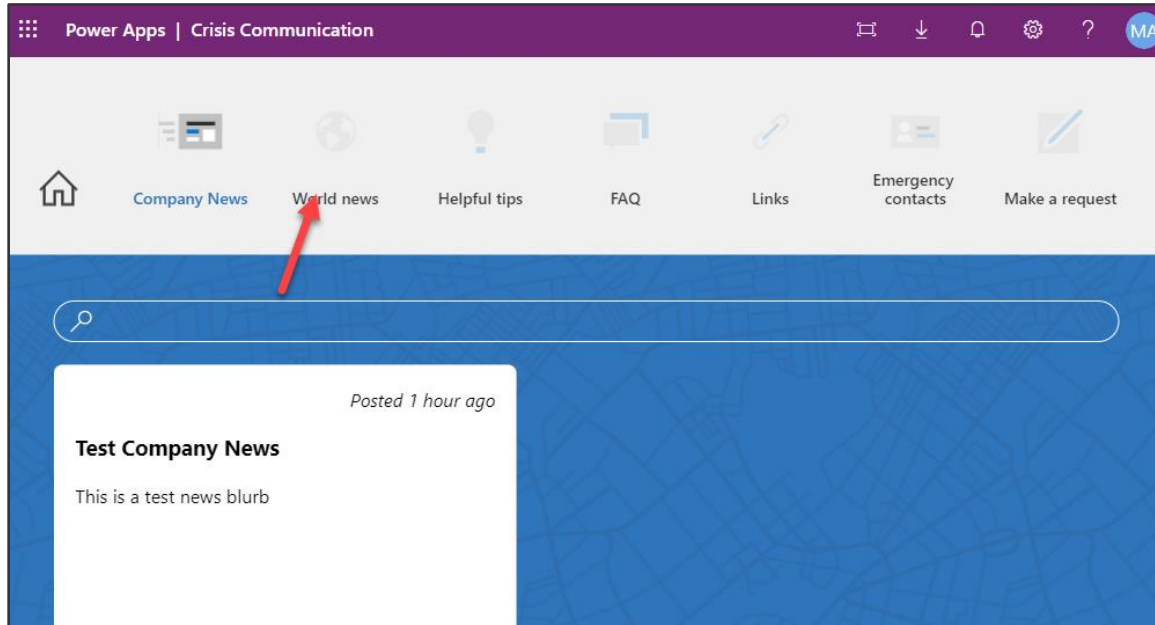

3. Click Sign for RSS, if prompted.

4. Click **Allow**.
5. The application should load.

6. Click **Company News**.
7. Your test news should show up here. Click **World news**.

8. You should see news from WHO news RSS feed.

9. Select **Helpful Tips**. You should see the test data you provided.
10. Close the application

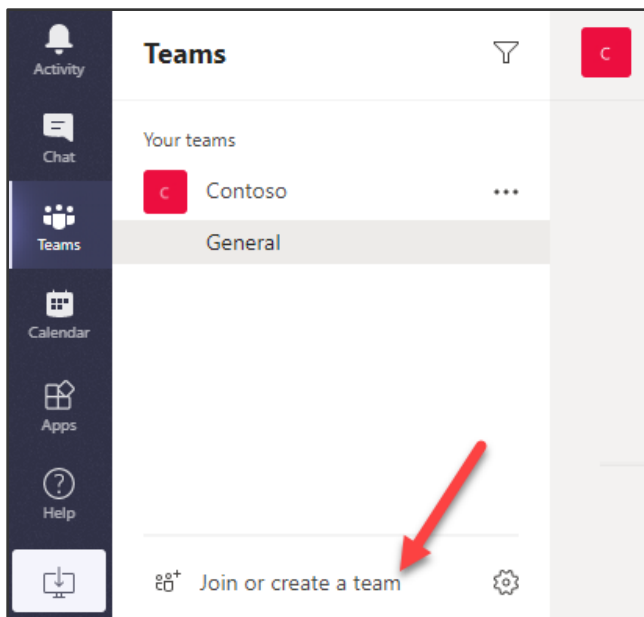

Exercise 4: Configure crisis communication request

In this exercise, you will create a crisis communication team and request channel in Microsoft Teams, you will also configure and test the crisis communication request flow.

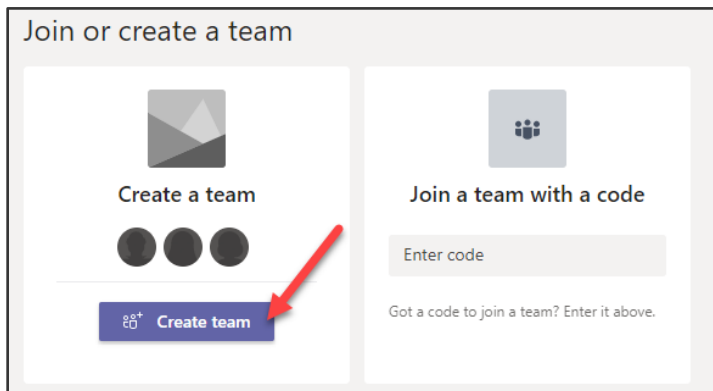

Task 1: Create crisis communication team

In this task, you will create a crisis communication team and channel.

1. Navigate to [Microsoft Teams](#) and sign in with your admin credentials
2. Select **Teams** and click **Join or create a team**.

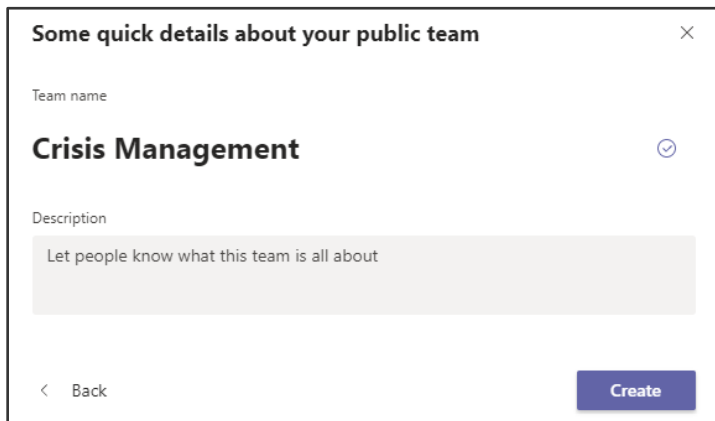

3. Select **Create a team**.

4. Select **Build a team from scratch**.
5. Select **Public**.

6. Enter **Crisis Management** for **Team name** and click **Create**.

Some quick details about your public team

Team name

Cancel Add

10. Click on the ... **More options** button of the channel you just created and select **Get link to channel**.

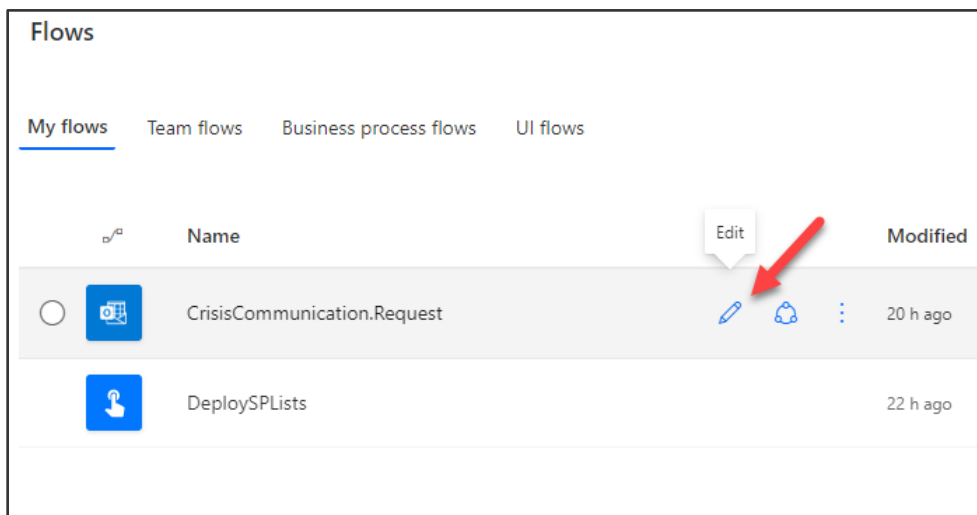

11. Click Copy and paste in on a notepad. You will need this information in the next task.

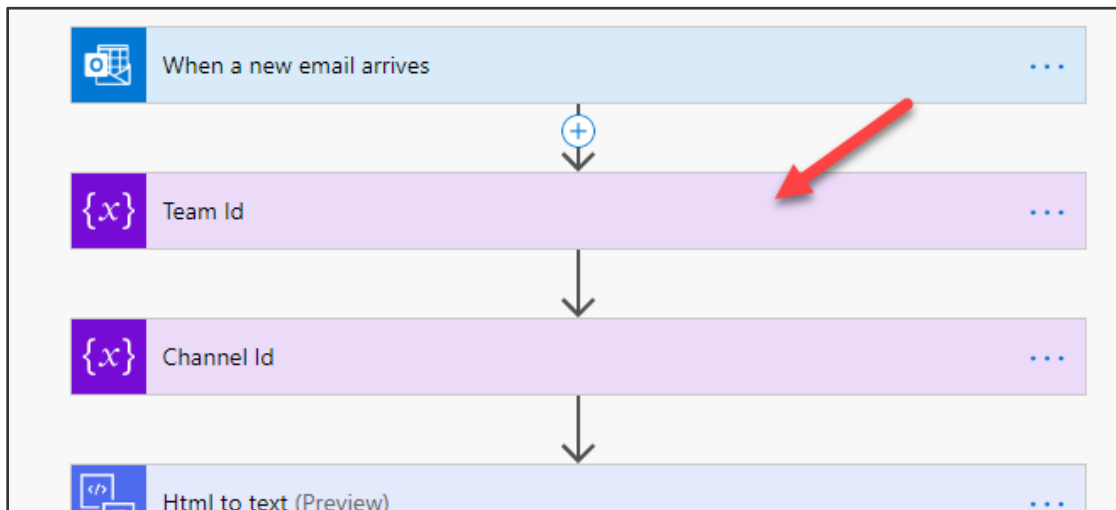

Task 2: Configure and test flow

In this task, you will configure and test the crisis communication request flow.

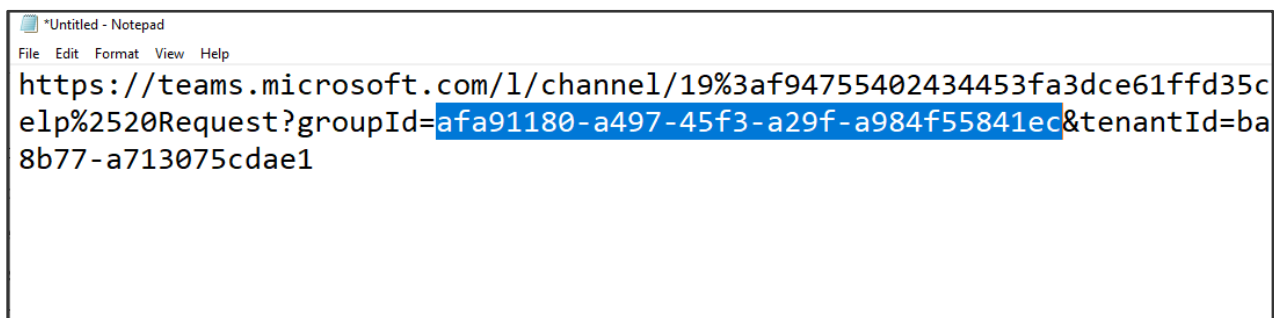

1. Navigate to [Power Automate](#) and make sure you are in the correct environment.
2. Select **My flows** and click edit on the **CrisisCommunication.Request** flow. This flow was imported when you added the crisis communication application.

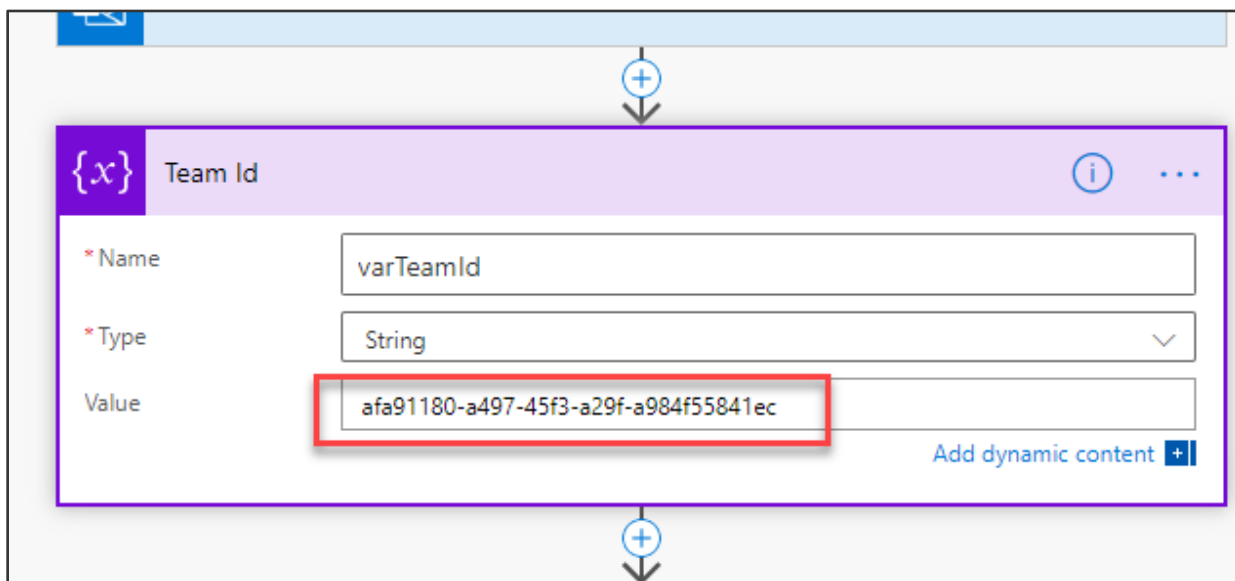

- Click to expand the **Team Id** step.

- Go to the notepad where you have the channel link and copy the group id. You will copy the GUID located between `groupid=` and `&tenantId=`.

- Go back to the flow and paste the group id you copied into the **Value** field of the Team Id step

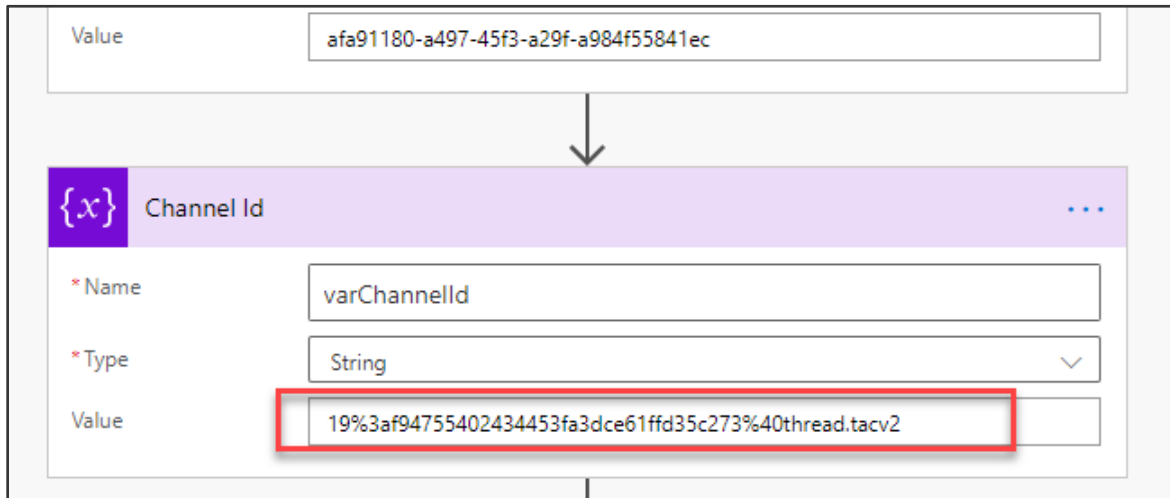

- Click to expand the **Channel Id** step.

- Go to the notepad where you have the channel link and copy the channel id. You will copy everything between channel/= and /Help.

- Go back to the flow and paste the channel id you copied into the **Value** field of the Channel Id step.

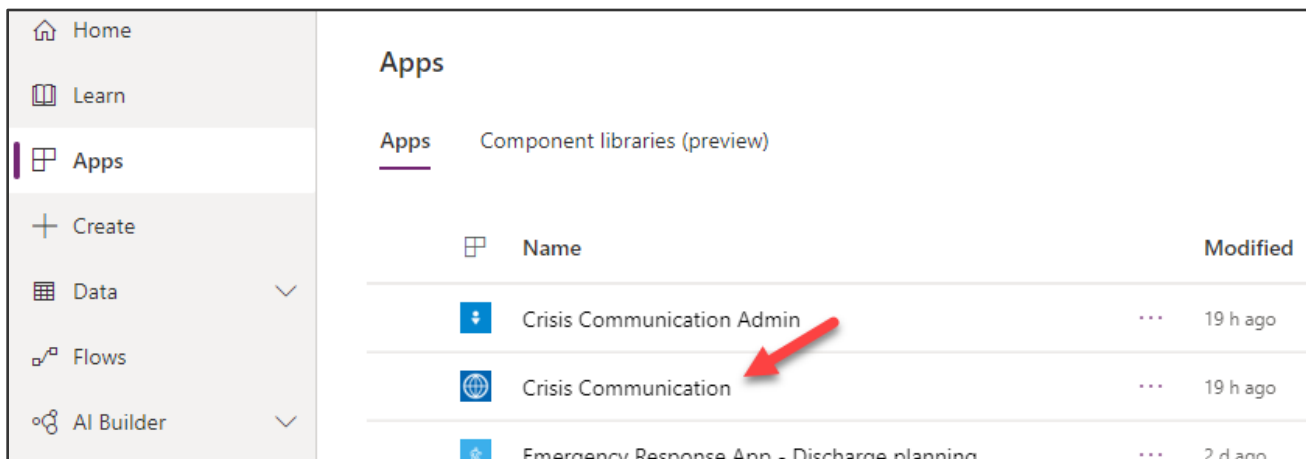

- Click **Save** to save the flow.

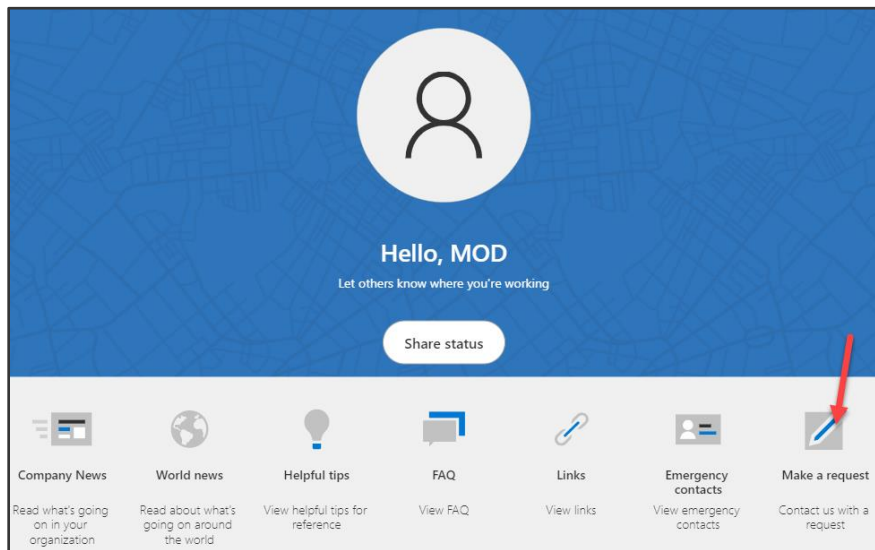

Task 3: Test the flow

In this task, you will test the crisis communication request flow.

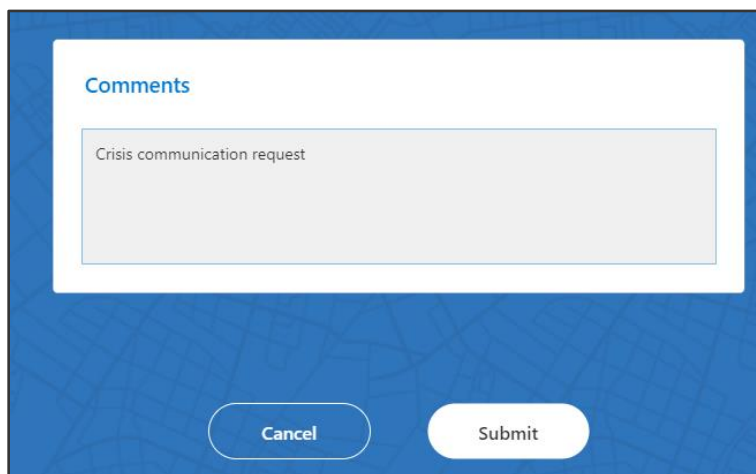

- Navigate to [Make Power Apps](#) and make sure you are in the correct environment.
- Select Apps and click to open the **Crisis Communication** application.

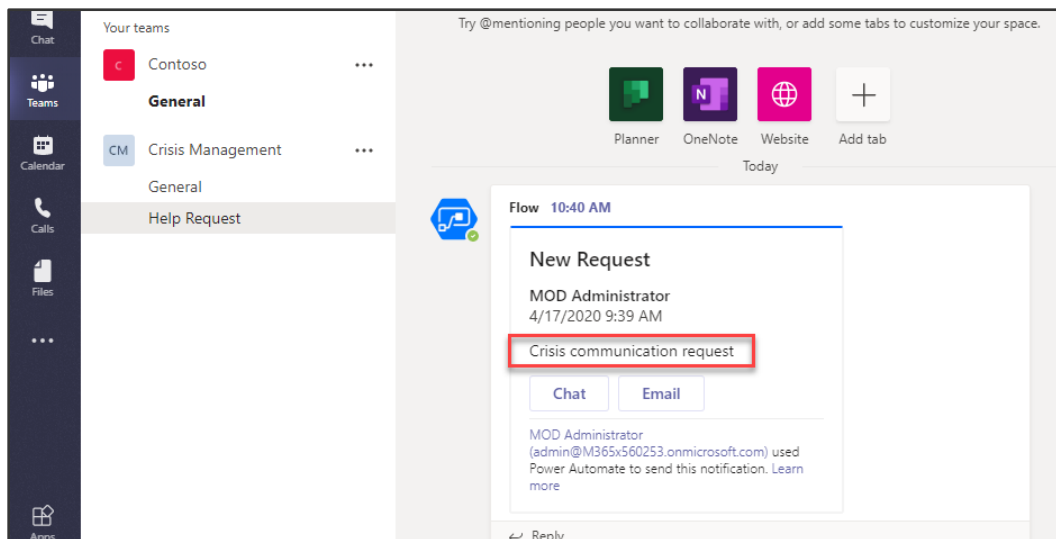

3. Click **Make a request**.

4. Provide comments and click **Submit**.

5. Go back to Teams and select the **Help Request** channel you created. You should a post from flow.

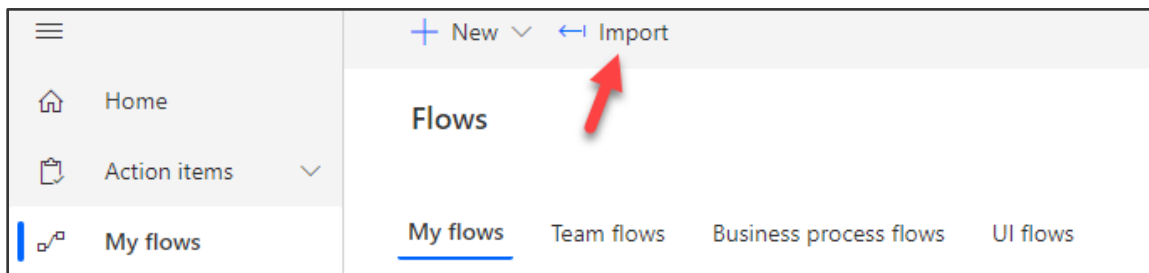

Exercise 5: Import and configure the news notification flow

In this exercise, you will import, configure, and test the crisis communication news notification flow

Task 1: Import and configure flow

In this task, you will import and configure the crisis communication news notification flow.

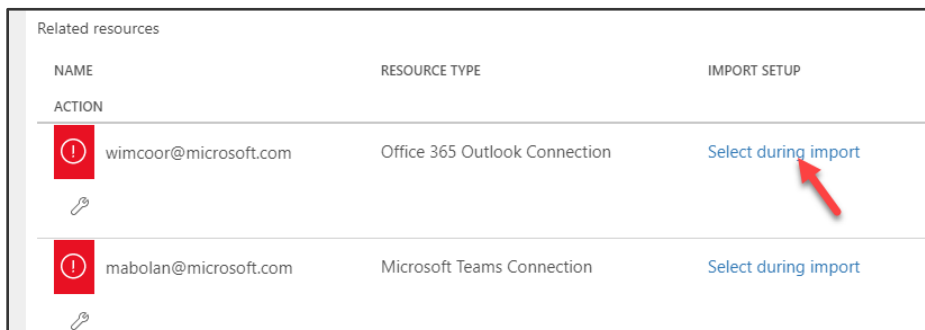

1. Navigate to [Power Automate](#) and make sure you are in the correct environment.
2. Select **My flows** and click **Import**.

3. Click **Upload**.
4. Browse to the crisis communication package you extracted, select **CrisisCommunicationNewsNotification.zip** and click **Open**.

5. Click **Select during import** for Office 365 Outlook Connection.

6. Select the available connection and click **Save**.

The connection or custom API already exists in the environment and must be selected when this package is imported.

12. Click + **Create new**.
13. Click + **New connection**.
14. Search for Power Apps and select **Power Apps Notification**.

Power apps

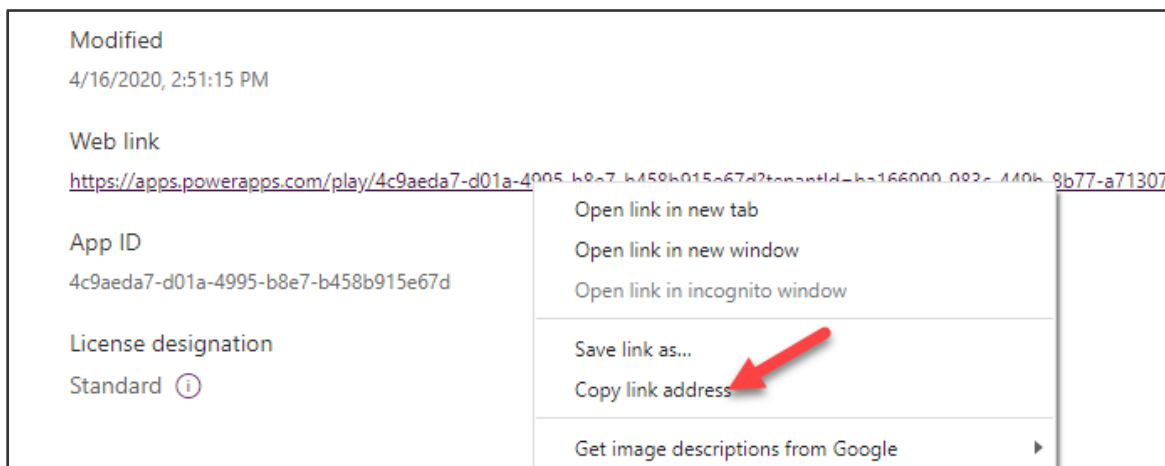

Connections > New connection

Name	Type	
Power Apps for Admins (preview) Microsoft	Standard	+
Power Apps for Makers (preview) Microsoft	Standard	+
Power Apps Notification (preview) Microsoft	Standard	+

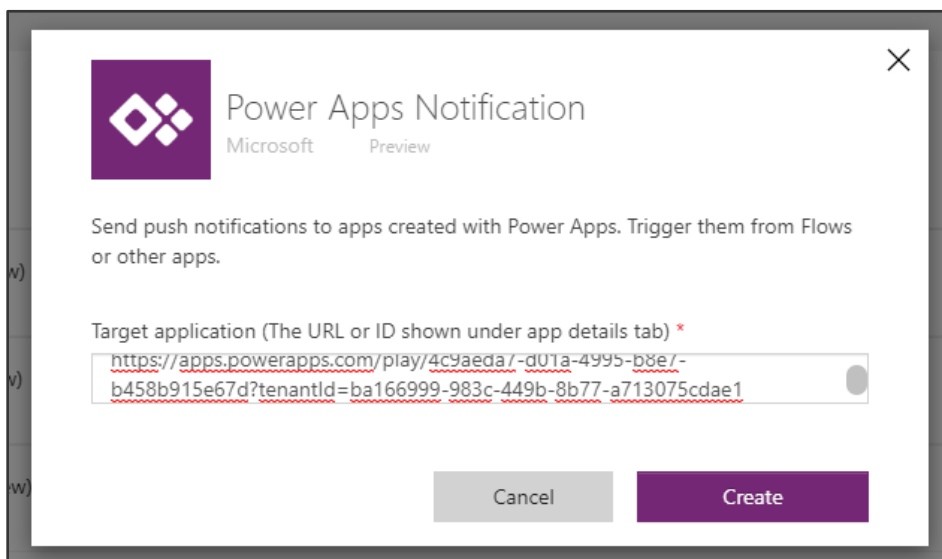

15. Start a new browser tab or window, navigate to [Make Power Apps](#) and make sure you are in the correct environment.
16. Select **Apps**, select the **Crisis Communication** application and click **Details**.

17. Copy the **Web Link**.

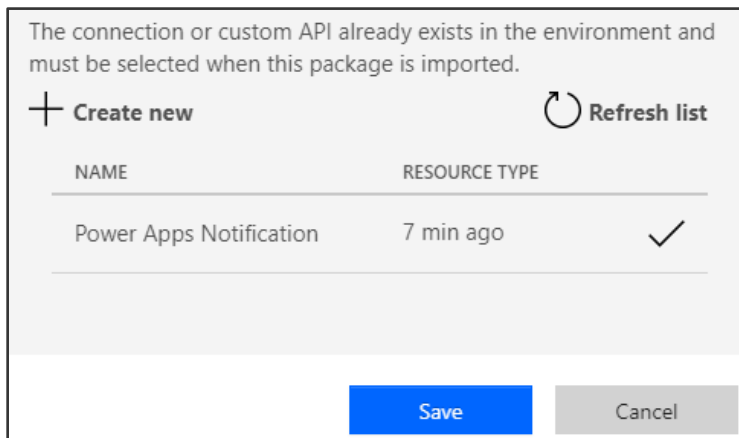

18. Go back to the flow import, paste the web link into the **Target application** field and click **Create**.

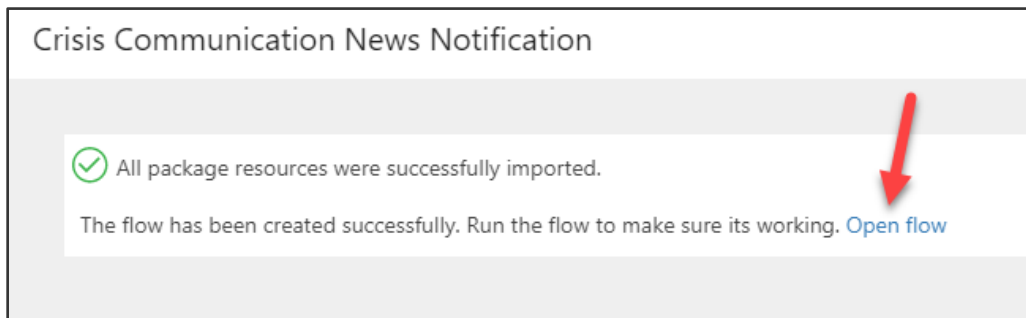

19. You will create the second connection and third. Click + **New connection** again.
20. Search **Azure AD** and select it.

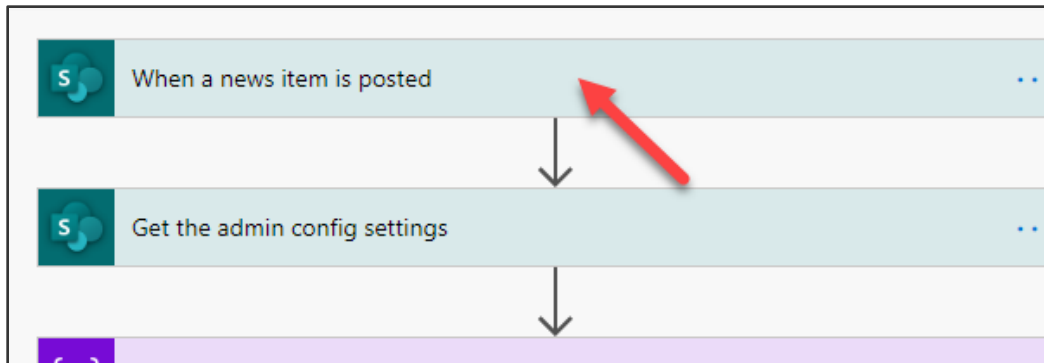

21. Click + **Create**.
22. Provide your admin user email and click **Next**.
23. Provide your admin user password and click **Sign in**.
24. Click **Accept**.
25. Click + **New connection** again.
26. Search for Groups and select **Office 365 Groups** and click **Create**.
27. Sign in with your Admin user.
28. Close the connections browser tab or window.
29. Select the Power Apps Notification connection you added and click **Save**.

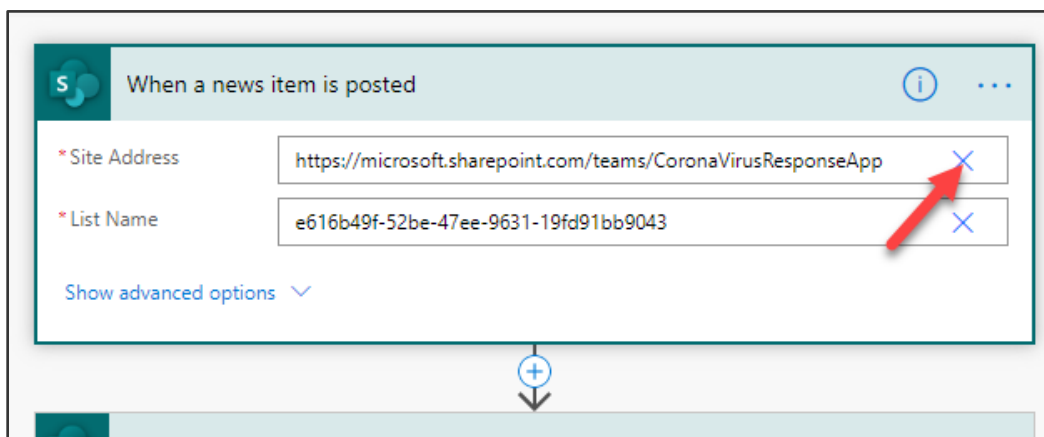

30. Click Select during import for the Office 365 groups connector
31. Select the Office 365 Groups Connection you added and click **Save**
32. You are now ready to import. Click **Import** and wait for import to complete.
33. Once the import is complete, click **Open Flow**.

34. Click to expand the **When a new item is posted** step.

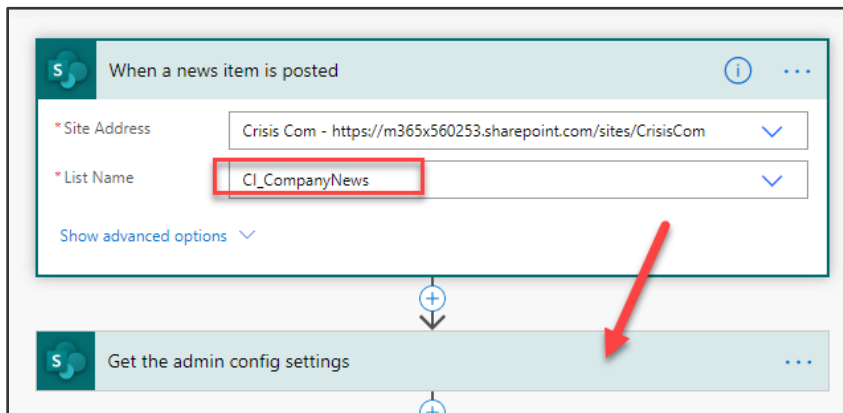

35. Clear the **Site Address** field.

36. Select your SharePoint site for **Site Address** and clear the **List Name** field.

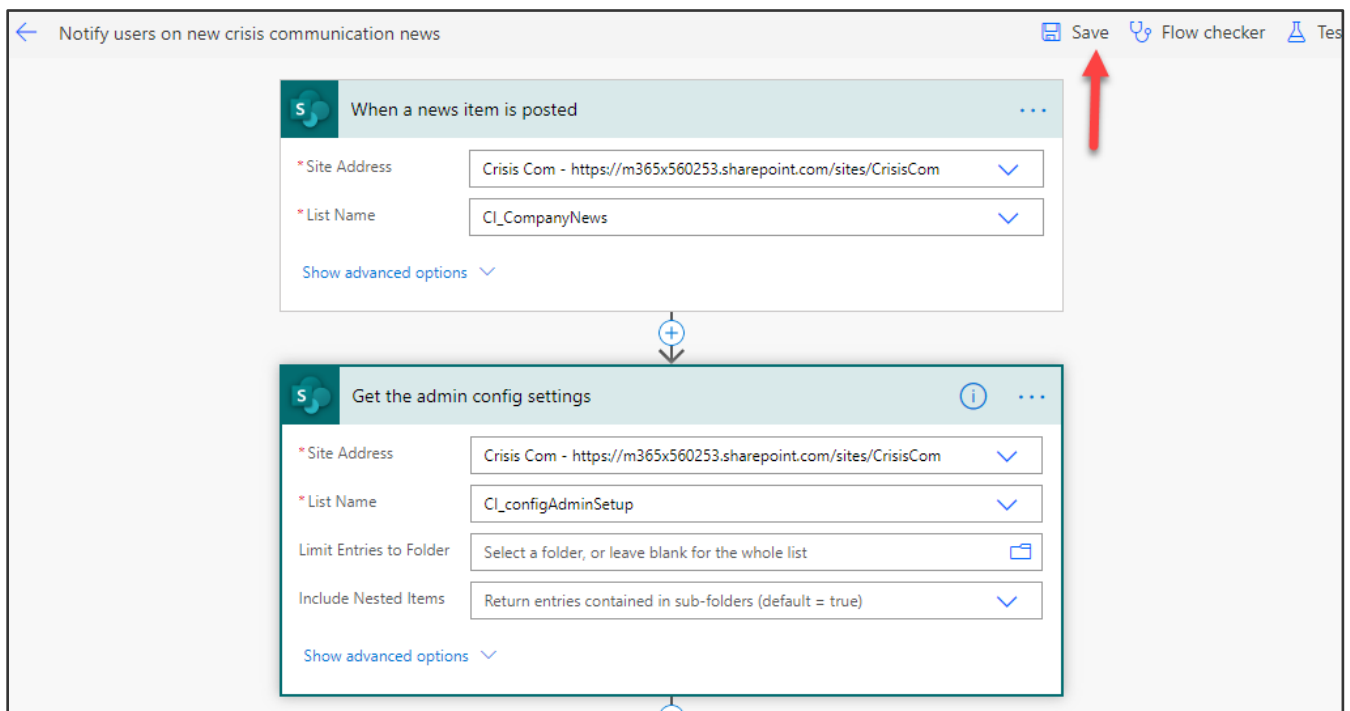

37. Select **CI_CompanyNews** for **List Name** . Then click to expand the **Get the admin config settings** step.

38. Clear the **Site Address** value and select your SharePoint sit.

39. Clear the **List Name** value and select **CI_configAdminSetup**.

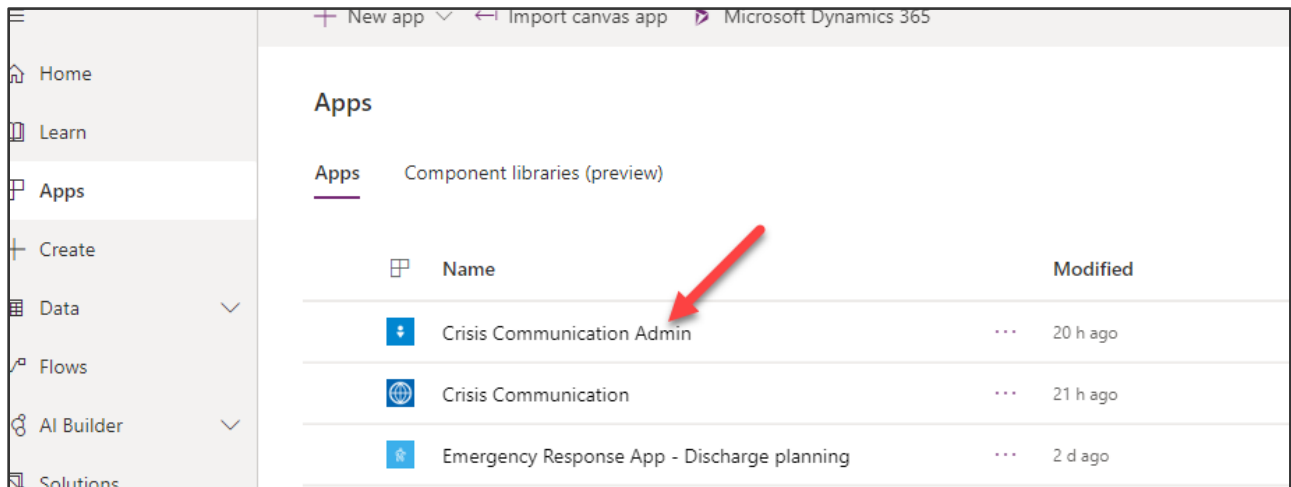

40. Click **Save** to save your changes.

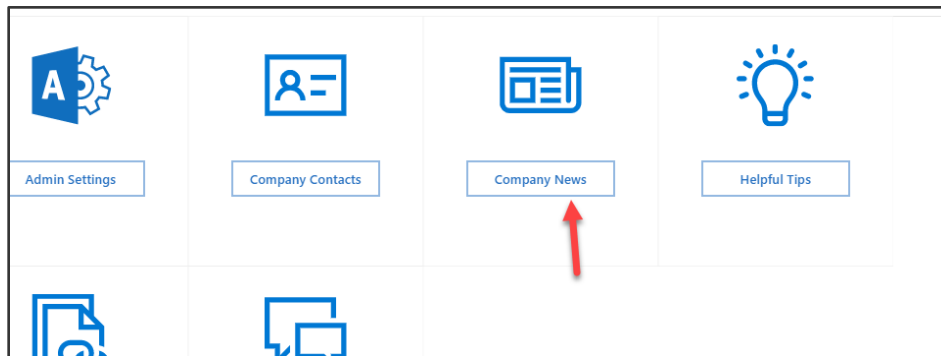

Task 2: Test news notification flow

In this task, you will test the crisis communication news notification flow

1. Navigate to [Make Power Apps](#) and make sure you are in the correct environment.
2. Select **Apps** and click to open the **Crisis Communication Admin** application.

3. Select **Company News**.

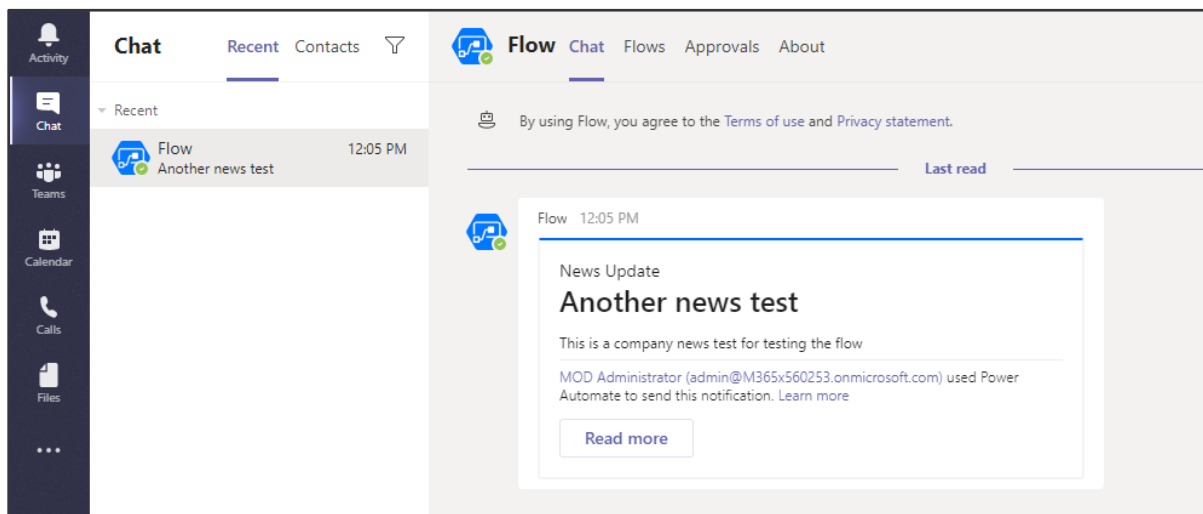

4. Click **Create new post**.

5. Provide post information and click **Save**.

The screenshot shows the 'Edit Update' form for a company news post. It has two main sections: 'Title' and 'Details'. The 'Title' section has a text input field with the value 'Another news test'. The 'Details' section has a rich text editor with the value 'This is a company news test for testing the flow'. Below the rich text editor is a 'Blurb' section with a text input field containing the same text. At the bottom, there is a 'Deprecated' toggle switch set to 'No' and a blue 'Save' button.

6. Go back to Teams. You should get a chat notification from the flow.

Next Steps
